That is very a misinformed interpretation of copyright law. There
are certain provisions for using portions copyrighted material for what
is called "fair use," -- but fair use does not allow you to reproduce
entire magazines filled with copyrighted material. Even for
"educational" purposes.

There are limitations which might apply. If the mags were placed online
for educational purposes or for reference purposes and proper copyright
credit was given, there is nothing the publisher can do.

Fair use allows many things as long as the intent is not profiteering.
While archiving the latest issue of Time would not be covered, a 10 year
old magazine can easily bo copied and archived for educational purposes,
providing there is no profiteering and the entire work is no available
as a complete download for personal use.

I am not a lawyer, but I do run a business and have to knwo at tleast a
little bit about these things.

Can anyone tell me anything about the internals
of the controllers for the Atari 2600 Indy 500 game?
I'm looking for info about the hardware: how do
they work? Do they use a potentiometer, or an
optical device like trackballs.

Thanks for any help.

Hi Mario,
I'm looking to connect my driving controllers or paddles to my PC to play driving games.
Have you discovered a way for that to work (i.e. drivers and pins out on connectors)?
I don't know if this is the direction that you're going in with your questions, but I'd be interested to hear if you've come across anything pertaining to this application.
Richard.

I don't think the driving controllers are going to work well
for you. They use a rotary switch (as someone else noted) and
that means it's similar to a digital controller. I guess (I'm
no expert) that it's like moving a joystick left-right-left-right-etc.
when you're turning the controller in one direction.

The paddle controllers have potentiometers inside which should
give an analog output. Not sure how these would interface to
the PC, though.

Maybe you should check out these sites:

  http://www.tiac.net/users/ten10ths/lw1.htm
  http://members.aol.com/twistygrip/

> I don't know if this is the direction that you're going in with your
> questions,

I was hoping the driving controller used an optical mechanism
similar to trackballs and spinners. I wanted to convert it to
a spinner for use in an arcade cabinet running MAME.

than your reply button. Dealer enquiries are welcome.

Last Updated 09/24/00
- Sold/traded items removed

I have the following Atari Manuals, Books, Magazines and Comics (which are
all in good to mint condition) which I am looking to sell or trade. If you
have any questions in regards to style. language, or cover art, etc., please
feel free to ask. I am open to reasonable offers, please make all offers in
U.S. Funds (buyer pays shipping). I am also willing to trade for certain
items, please see my list at the end of this post.

If you are interested in any of these items, please respond to me by using
this link jim_l@NOSPAM.telusplanet.net?subject=Classics.Atari.Books
(removing the NOSPAM first). Or email me if you would like a current
listing of items I have for other systems (Atari 2600/5200/7800/Jaguar,
Colecovision, Intellivision, Classic Computers (Vic 20/C64/ADAM/Atari),
Vectrex, Microvision, or Handheld games) sent to you, (please specify
system).

This list covers the following categories:
- Atari Force Comics
- Atari 2600 Manuals
- Atari 8bit Books and Manuals
- Atari ST Books and Manuals
- Atari related Magazines

Atari Force Comics
==========
All are in Mint Condition
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #9 - September 84
- Issue #11 - November 84
- Special Issue #1 - 1986

Atari 2600 Game Manuals Please make an offer
==========
- Artillery Dual by XONOX - Full color French (Canadian) variation 1983 (rare)
- Asteroids - Full color 5 language variation 1979
- Atari Game Catalog (49 Games) Full Color English variation 1982 -Breakout - Full color 5 language variation 1978
- Centipede - Full color 5 language variation 1982
- Chuck Norris Superkicks by XONOX - Full color French (Canadian) variation 1983 (rare)
- Combat - Full color 5 language variation 1978
- E.T. - Full color 5 language variation 1982
- Jungle Hunt - Full color English variation 1983
- Kangaroo - Full color 5 language variation 1983
- Maze Craze - Full color English variation 1978
- Missile Command - Full color 5 language variation 1980
- Mouse Trap by Coleco - 3 color English/French (Canadian) variation 1982 -Night Driver - Full color English variation 1980
- Outlaw - Full color English/French (Canadian) variation 1978
- Outlaw - Full color English variation 1978
- Pole Position - Full color 5 language variation 1983
- Popeye by Parker Bros. - 3 color English variation 1983
- RealSports Baseball - Full color 5 language variation 1982
- Star Raiders - Full color English variation 1982
- Street Racer - Full color 5 language variation 1978
- Yars' Revenge - Full color 5 language variation 1981
- Yars' Revenge - Full color English variation 1982

8-Bit Books Please make an offer
==========
- Compute's "The Atari Basic Source Book"
- Atari Basic Reference Manual

ST Books Please make an offer
==========
- Atari ST Volume One VDI
- Atari ST Volume Two AES
- Atari Volume Three TOS
- Atari ST GEM Programmers Reference
- Atari ST Tips & Tricks
- Atari ST Internals
- Programmers Guide to GEM
- MC68040 32-Bit Microprocessor Users Manual - by Motorola

- MC68000 8/16/32-Bit Microprocessor Users Manual (eighth edition) - by Motorola

Manuals/Tech Guides (software status specified) Please make an offer
==========
The majority of the ST/TT manuals are of the binder variety
- Micro C Shell - by Beckemeyer Devlopment Tools (without software)
- LDW Power Spreadsheet - by Logical Design Works (without software)
- Superbase Personal - by Precision Software (without software)
- dBMan - by Atari (without software)
- 1st Word Plus - by Electric Distribution (without software)
- HyperPaint - by Atari (without software)
- Easy Draw - by Migraph (without software)
- Regent Base/ Regent Base 2 - by Regent (without software)
- Publishing Partner Professional / PageStream -by Soft Logic (without software)
- Publishing Partner - by Soft Logic (without software)
- Touch-Up - by Migraph (without software)
- Microsoft Write - by Atari (without software)
- Codekeys The Macro Tool - by CodeHead Software (without software)
- Degas Elite - by Intregal Sollutions (without software)
- Brataccas - by Psygnosis (without software)

Electronic Games Magazine memorabilia Please make an offer
==========
- Order Form Insert (Vectrex Version) - Mint Condition. This was the original full color order form insert that was packaged in with many companies cartridges to help promote sales of 'Electronic Games' magazine. It is a three page foldout which covers all the regular articles that 'Electronics Games' ran. The front cover is purple and offers Vectrex players a 44% discount.

Trades
==========
I am also willing to trade for/towards rare or sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar CD Unit or Jaguar Accessories
- Atari Jaguar Games (Most titles)
- A working Vectrex controller
- An original Intellivision keyboard for the original Intellivision
- Atari Force Comics Issue #1 (January 1984), Issues 4 thru 7, and Issues 12 thru 20

Atari7800.com is unofficially open!!

Check out the www.atari7800.com site and send in an order for any system you like. They have 2600s, 5200s, and 7800s all in great shape. They even come with warranties!!

Atari Systems are back in full force as they have plenty of each system to go around as well as many games at affordable prices. They even have an extensive collection of mint systems and games!!

Any Atari fan cannot miss out on these great opportunities.

The store officially opens October 7th but I'm sure you can email them and find out more deals for yourself!!

I think he just put one zero too much in that message! Even $80 seems a
bit high, mind you...

Hello There
For some time I have had startup problems on my Falcon 030. When I switch it
on
the Harddisk and the rest of the machine doesn't start. If I press the reset
button for
5-10 seconds the machine normaly starts, but some time I have to switch the
Falcon and
press the reset button a lot of time to get the machine to life.
What's wrong ???

I have had the machine for 6 years now, but it is only the last year this
problem has appear.

Thank, Preben Sloth

I've had the same problem a few times. Loose socketed chips have been
the suggested culprit, but I haven't opened her up to be sure.

Good luck with your search.

Do not say you can buy these games for .80 cents each at O'Shea, Ltd because
they went up in price look!

WHOLESALERS or RESELLERS who purchase 1,000 or more Atari games Cost is
$.80 each (plus shipping)

Indivduals who purchase less than 1,000 games Cost is $2.00 each (plus
shipping) Minimum is 12 games

To respond to this message, please use the enclosed link rather than your reply button

Last Updated 11/01/00
- Sold/traded items removed

I have the following Atari 8bit components and cartridges for sale. All the equipment is cleaned and detailed, and in good or better condition, but without boxes unless noted. If you have any questions in regards to unit condition, please feel free to ask.

All prices quoted are in U.S. funds with the buyer paying shipping. For items that I am taking offers on (no price listed), please make all offers in U.S. funds. I am also willing to trade for certain items, please see my list at the end of this post.

If you are interested in any of these items, please respond to Jim at jim_l@NOSPAM.telusplanet.net?subject=Classics.Atari.8bit (removing the NOSPAM first). Or email me if you would like a current listing of items I have for other systems (Atari 2600/5200/7800/Jaguar, Colecovision, Intellivision, Classic Computers (Vic 20/C64/ADAM/Atari), Vectrex, Microvision, or Handheld games) sent to you, (please specify system).

Hardware Please make an offer
==========
- Atari 600XL - with power supply, RF cable
- Atari 800XL - with power supply, RF cable
- Best Data Smart One 2400X - 2400 baud modem

Controllers Please make an offer
==========
- Paddles (multiple sets) - for Atari & Commodore units
- 2x Suncom Tac Joysticks - for Atari & Commodore units
- 1x Spectravideo Joystick with suction cup base - for Atari & Commodore units

8-Bit Cartridges Please make an offer
==========
- Basic with Basic Reference Manual
- Final Legacy
- Megamania - In a sealed/shrink-wrapped box, box is slightly squashed.
- Realsports Football
- Star Raiders
- Tennis

8-Bit Books Please make an offer
==========
- Compute's "The Atari Basic Source Book"

Atari Force Comics
All are in Mint Condition
==========
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #11 - November 84

Trades
==========
I am also willing to trade for/towards rare or sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar CD Unit or Jaguar Accessories
- Atari Jaguar Games (Most titles)
- A working Vectrex controller
- An original Intellivision keyboard for the original Intellivision
- Atari Force Comics Issue #1 (January 1984), Issues 4 thru 7, and Issues 12 thru 20

Third time is a spanking. Or a plonking as the case may be.

This dude suckers people who don't know. I nearly bought a Jr. Pac Man from
him until someone on RGVA pointed out that it was an Oshea title. (Then I
dled the ROM for my PCAE and haven't even gone and paid the 80 cents for
it...)

huh?! I bought o'shea games for $.80/ea, I bought a LOAD of 7800 games so
I didn't have to worry about a "12 game minimum" but I was well under 1000
:)

Last Updated 12/28/2000
- Sold/Traded Items Removed

I have the following Atari 8bit components and cartridges for sale. All the equipment is cleaned and detailed, and in good or better condition, but without boxes unless noted. If you have any questions in regards to unit condition, please feel free to ask.

All prices quoted are in U.S. funds with the buyer paying shipping. For items that I am taking offers on (no price listed), please make all offers in U.S. funds. I am also willing to trade for certain items, please see my list at the end of this post.

If you are interested in any of these items, please respond to Jim at jim_l@NOSPAM.telusplanet.net?subject=Classics.Atari.8bit (removing the NOSPAM first). Or email me if you would like a current listing of items I have for other systems (Atari 2600/5200/7800/Jaguar, Colecovision, Intellivision, Classic Computers (Vic 20/C64/ADAM/Atari), Vectrex, Microvision, or Handheld games) sent to you, (please specify system).

Hardware Please make an offer
==========
- Atari 600XL - with power supply, RF cable
- Atari 800XL - with power supply, RF cable
- Best Data Smart One 2400X - 2400 baud modem

Controllers Please make an offer
==========
- Wico Command Controller

8-Bit Cartridges Please make an offer
==========
- Basic with Basic Reference Manual
- Final Legacy
- Megamania - In a sealed/shrink-wrapped box, box is slightly squashed.
- Realsports Football
- Star Raiders

Hi all,

We have the pleasure to announce the opening of Europe Shareware Espana,
specially dedicated to the Spanish Atari users, and with the objective
to facilitate the purchase of shareware programs.

For more details, to visit the Web page whose address is indicated
below.

Hi all,

We want to present LogLyser, freeware sponsorised by Europe Shareware, a
small utility which calculate the time you are online over the months as
written in the Iconnect's ONLINE.LOG file. LogLyser is a must have for
the CAB and Emailer users.

For more details, visit http://www.europe-shareware.org/

Queremos presentar LogLyser, programa gratu=EDto patrocinado por Europe
Shareware, una peque=F1a utilidad que calcula el tiempo que se lleva
conectado a Internet tal como queda registrado en el fichero del
Iconnect ONLINE.LOG. Esta utilidad es imprescindible para los usuarios
de los programas CAB y Emailer.

Para m=E1s detalles, visitar el siguiente sitio:
http://www.europe-shareware.org/

Just to let those insterested know...
Holmes Atari 8bit Games site has moved as of now to:
http://homepages.paradise.net.nz/atari/

Please update your bookmarks, as the old site may go down at any stage.
Also bear in mind, that I have just dumped a copy of the page(s) on this
new server, thus many things may be broken, but most games should be
online...
--
Regards

Aaron

If you don't like them so much, why are you emphasizing there stand on this
newsgroup? All you're doing is advertising for them.

Because it's standard spammer reverse psychology, he or she seems to
be complaining so you go look to see what's so bad about the site.

I'm sure most Amiga Gamers have looked at the RPG Ambermoon at one time or another. Said by some to be a classic Amiga game, but unfortunately only ever released in Germany, in the German language due to the demise of the company.

Although never released on the ST they did loads of other cool games!

Thalion released some of my favourite games on the 16-bit computer platforms so I have decided to create a web page to their memory.

http://Thalion.amiga.tm OR http://Thalion.atari.org

Recently I discovered possibly the only remaining copy of the Unreleased AmberMoon - English. It is not on the site at the moment, (I am playing it to make sure it isnt half finished or something!).

There are copies of ALL the Thalion games to download on the site in both ST and Amiga format (Plus some PC versions!). Unfortunately I dont have many original versions (Most of the games have been found floating around in a cracked form on the internet). And so some dont work on AGA or machines above 68000. I have converted the Originals I have to WHDL versions (But these too are not available for download!) but I dont have too many.

If you would like to get a copy of the English version of Ambermoon before it is put on the site, you can donate a WHDL or JST converted Thalion game to the site and I will send you the DMS images.

These are the games they did and most have installers. English and German versions are required!

 -Warp
 -Leavin'Teramis
 -Magic Lines
 -Chambers of Shaolin
 -The Seven Gates of Jambala
 -Ghost Battle
 -Tangram
 -Trex Warrior - 22nd Century Gladiator
 -Lethal Xcess - Wings of Death 2 *)
 -Atomix
 -Tower Fra
 -Enchanted Land
 -Airbus A320 - European Edition
 -No second Prize

Mail me at either a1exh@hotmail.com or mchu5ash@fs2.ee.umist.ac.uk

Cheers

Alex

Wow! Sounds like seriously cool stuff, Alex. Nice one. I wish I had the
ability to provide you with an installer for some of the games.

All the best,
Angus Manwaring. (for e-mail remove ANTISPEM)

Dont worry you'll get your hands on Ambermoon English soon enough!

Someone has already donated Ghost Battle so that is a start!

Cheers

I am looking for a AVR, WAV, SND and other audio file format decription -
byte by byte.
I am making a converter - I know there are some PDs but they are not fast
and with the
right options.
If you got decriptions, or know where I can find some please mail me on

How about using the open source "sox" package as a starting point and optimize
it if you think that you can speed it up?

Hi Leute

Hab folgendes Anliegen:

Hab mir ein 08 / 15 - Keyboard mit Midi - Schnittstelle (in / out) ausgeborgt und m�chte es an meinem PC (233 MMX, Win95, 64MB Ram, AWE64Gold) betreiben. Nun habe ich folgendes Problem: Ich schaffe es nicht, am PC �ber die Soundkarte irgendeinen Ton des Keyboards zu h�ren, geschweige denn einzuspielen. Ich m�chte Midi - Daten ins "Cubasis AV" u.�. einspielen und dort weiterbearbeiten. Nur habe ich dabei anscheinend irgendein Treiber- und Installationsproblem, bei dem ich anstehe. Die Verkabelung pa�t 100%ig, nur ich kann der Soundkarte keinen Ton entlocken. Nun meine Frage: Was mu� im Punkt "Multimedia" in der Systemsteuerung alles installiert sein, da� ich die Midi-Daten, die ich in den PC schicke, in Musik umsetze? Was mir aufgefallen ist: Beim Mischpult (Play Control) ist der Punkt "Ton aus" bei Midi deaktiviert. Vielleicht weis irgendwer eine L�sung f�r blutige Anf�nger wie mich, denn ich hab (bis jetzt noch) absolut keinen Tau, wie ich das machen kann. Weis wer Rat? Wenn geht, bitte Antwort an meine e-mail-adresse klaxmax123@yahoo.com

Herzlichen Dank f�r die M�he,
Sascha

Unfortunately I dont have many > original versions (Most of the games have been found floating around in a > cracked form on the internet). And so some dont work on AGA or machines above > 68000. I have converted the Originals I have to WHDL versions (But these too > are not available for download!) but I dont have too many. > > If you would like to get a copy of the English version of Ambermoon before it > is put on the site, you can donate a WHDL or JST converted Thalion game to the > site and I will send you the DMS images. I'd be really really careful with that. Almost the whole Thalion team is now aboard Blue Byte. You can find info on the old Thalion games on the Blue Byte site I think. Blue Byte released the Ambermoon sequel Albion. Yours, Lukas Hartmann

Hast Du einen 08/15-Midi-Adapter von Karstadt oder einem anderen Kaufhaus
gekauft? Daran *k�nnte* es liegen, da bei mir ein solcher Midi-Adapter
ebenfalls nicht funktioniert: Weder bei meiner jetzigen Diamond Sonic
Impact S90 sonst bei der Soundkarte davor - Soundblaster AWE 16.

I have made friends with most of the Ex-Thalion members, especially the ones at Blue Byte. However they dont own the copyrights to the games either, and they do not condone piracy which is why there is now the ....24 hrs after download... bit on the site.

No-one seems to know who (If anyone) owns the rights to the Thalion games. Some were co-produced with Grandslam, but they are dead too.

Non of the games are on sale anymore, and I dont think anyone is too upset. Plus the discovery of Ambermoon in English has brought fun to 1000's.

I know that Albion is a game from a current games company. And I wouldn't consider putting that up for download, although I might ask if I can put the demo on the site.

Cheers

Alex Holland

YES... I knew there are people intressed....

im working very hard... i now have the desktop emulated.. i must now going
to emulate the blitter..... and that's a though wone.... i think it may take
a week or 3 ... then it's finished....

but.. i let know when it's finished

Hi All,

Good news :-)

Due to a change of plan I will now be attending the Atari Show :-)

I will be wearing a badge, please come and chat with me :-)

You will find me on Chris Crosskey's stand or wandering around :-)

I look forward to chatting to you all :-)

Hi!

Are you planning to emulate the DSP as well? (If you don't it will be a
pretty useless emulator as allmost all Falcon programs use it :-)

/Peter

You know something, I really would like to get back in the Atari/TOS scene so
"yeah" I love to see something like that!

I have a few questions, one being will the DSP be emulated or could a DSP card
be used? With the way they make the PC's now, I wouldn't be surprised if the
whole thing is done on software :)

Of course I should warn that you may get some opposition from "purists" who
hate any emulation on on Atari/Hades/Milian machine. But then again, you can
just ignore them ;)

Anyways I hope you succeed in this endevior. Maybe I can get back to my own
project of running older ST programs under Magic/MINT :)

Hi every-one ,

 I've moved on to the Mac and as such am selling off some older stuff that might be of interest to those of you using the Atari for midi.

I'm selling -

 C-Lab (precursor to Emagic) Unitor 2 adds two extra midi in/ outs to the Atari for a grand total of 48 midi channels + SMPTE sync read/write ability. .

C-lab/creator Notator 3.2 Midi sequencing program with VERY tight timing plus Notation ability . Used by Future Sound of London amongst others.

Steinberg Jones Cubase 3.1 - Another great sequencing program.

Unitor is in great shape both programs have manuals , keys , and origonal program disks.

$ 175.00 plus shipping.

Be well,

-arik-

Hasbro Interactive sent me a copy of their new Atari Arcade Hits #1 arcade emulator. (This emulator was announced by Dana Henry of Hasbro Interactive on my Back In Time webcast last April. It will not be on store shelves for another two weeks.)

The emulator supports Pong, Asteroids, Tempest, Centipede, Missile Command, and Super Breakout. In a word -- it ROCKS!! This is a HUGE improvement over the Frogger and Centipede titles from Hasbro Interactive.

The CD is also full of history, photos, and an video interview with Nolan Bushnell. It even includes 6 arcade desktop themes/fonts for use in Windows 9x.

As far as I know, the emulator isn't due to hit the store shelves for another two weeks, so be sure to visit Back In Time for an EXCLUSIVE advance preview.

Actually, Atari Arcade Hits #1 has been out for a few days now. I've been
waiting for reviews before deciding whether to pick this one up, as I've
already got 5 out of 6 of these games emulated on Arcade's Greatest Hits:
The Atari Collection 1 for PlayStation. Your review certainly is
encouraging! The ability to upload high scores to a special Web site would
add a whole new level of competition, and I'd like to check out the
interviews and desktop themes, too.

I have heard that Hasbro plans to do two more of these packs. Does anyone
know what games will be on them?

True, I just saw AAH#1 on sale in a local EB. Bottom shelf of the new releases section for $30. I too would like to see a comprehensive review that compares to the games available on the Playstation and on the PC (in the form of MAME or other emus).

> I have heard that Hasbro plans to do two more of these packs. Does anyone

Hmmm. If they had some really cool games, that'd be awesome. This pack doesn't excite me much since, as you noted, many of us already have most of these games on the Playstation.

My understanding was that these games had not been released yet. I live north of Boston (about 20 minutes from Hasbro Interactive's HQ) and had visited CompUSA, Babbages, and Electronics Boutique yesterday. None of them had it yet.

I have also heard that there will be two more of these emulators released in the future, but I do not have direct confirmation from Hasbro Interactive yet. I will try to find out.

I also think that the high score web site is a cool idea.

Yes, most of these games do exist on the Playstation. In fact, Digital Eclipse, the developer of this package for Hasbro Interactive, has developed a number of arcade emulators for the Playstation including Arcade's Greatest Hits: The Midway Collection 2, and Arcade's Greatest Hits: The Atari Collection 2. Both of these were published by Midway.

...and also Atari Collection 1 FWIW (among others), which would be the PSX
release with "5 of the same games out of the 6" as others in this thread
mentioned. This new PC release for Hasbro goes a bit more in-depth, though.
There are classic and enhanced graphics modes of each game, the resolution
is going to be higher (obviously), there's the option of having the original
cabinet art framing the game play, there are desktop themes, the ability to
post scores to the web, etc.

The multimedia section is not a duplicate of Atari Collection 1, though.
They're entirely distinct packages done for different publishers, so the
interviews and supporting materials are unique in both. The PC version has
a 30+ minute interview with Nolan Bushnell on many aspects of Atari, Pong,
and video games. The PSX version interviewed Ed Logg, Dave Theuer, and Ed
Rothberg.

The "enhanced" versions of the games are largely graphics enhancements --
subtle so that the game is still quite intact. In Tempest, however, you can

choose to play Duncan Brown's unique Tempest Tubes levels in addition to the original arcade Tempest.

Personally, I have a lot of fun with Asteroids' new Trippy Mode. (It's like normal Asteroids except there's a trailing after-image and the colours shift constantly, like the Microsoft curves-and-colours screen saver. Also, thrust fires by itself minutely every two seconds, just to keep you on your toes. The challenge of Trippy Mode is that you have to play by feel sometimes, because your eyes can be confused by the psychedelic effects.) Naturally, the *normal* version of Asteroids is in there too.

I'm afraid to ask, but... what are the requirements for this CD? I have
a lowly Pentium 90, and I remember that the Activision Action Pack was
pretty slow on it.

Thanks,

Ferg

I seen it in Wal-Mart already. I'm waiting for it to come to EB so I

can trade Atari Collection Vol. 1 for it :)

Only Battlezone is missing which I can live with as long as it'll
appear on the next release (along with Crystal Castles an Millipede,
which I trust will have analog joystick support this time ;)

Heh, I'm wondering if there's a way to play back movie clips from
Playstation disks. I tried this program that converts them to AVI
format but at 8 megabytes each, no way...

Jeff, I bought Atari Arcade Hits Volume 1 a few days ago, and I feel it is a superb product. However, I do have one problem: I can't play the Tempest Tubes variation of Tempest!

I have tried enabling it by selecting "enhanced" mode for Tempest, as well as going to the configuration and placing a check mark in the Tempest Tubes check box. Either way, I still end up with the "regular" Tempest game. I have noticed that selecting "enhanced" mode will automatically put the check mark in the Tempest Tubes box on the configuration screen, and it will change the simulated "attract mode" on the picture of the arcade machine, but the game itself doesn't change. A little over a year ago, I saw an actual Tempest arcade machine with the Tempest Tubes ROM installed, so I know that all the levels are supposed to look different.

Have other owners of Atari Arcade Hits Volume 1 experienced this problem?

That's great to hear, Jeff. I look forward to the patch.

Thanks again for another great classic gaming product!

I have the following Atari Force Comics, for sale or trade, all are in mint condition. If you have any questions in regards to cover art, etc., please feel free to ask.

Atari Force Comics Please make an offer
==========
All are in Mint Condition, some multiples available
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #9 - September 84
- Issue #11 - November 84
- Special Issue #1 - 1986

If you are interested in any of these items, please respond to Jim at classic.games@NOSPAM.telusplanet.net (removing the NOSPAM first)

Please make all offers in U.S. Funds (buyer pays shipping), I am also willing to trade for some rare or shrink-wrapped/sealed titles for
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped/New or Complete Intellivision Triple Challenge
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhaman, Super Cobra or Popeye
- Intellivision Draughts
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A working Vectrex controller.
- And of course the ever popular, original Intellivision keyboard (should I be so lucky :).
- Atari Force Issue #1 (January 1984)
- Atari Force Issues 4 thru 7
- Atari Force Issues 12 thru 20

I was gonna to mention that, it just keeps running orginal Tempest...one
time I even got bleached out colors {Shrug}

Anyway, I got Atari Arcade Hits this weekend and had fun with it,
especially the enhanced modes. I only have a few comments on how it
can be improved...

1.) Tempest plays quite well, but seems to be a bit squashed and really could use an antialasting option like MAME. The "vector flair" option makes the whole thing look too much like a watercolor painting and slows up my PII. Hmmm...might using something like Direct X for vector display be feasible? :)

2.) Trippy mode on Asteroids...best freaking thing from the whole thing! How 'bout having trippy mode for "all" games? Tempest and Centipede would really rock with the trailing effect and pulsating colors. Jeff Minter would be so proud... ;)

That's it really...

That is a DirectX surface being used, but the line-draw code is ours. I'm surprised about the slow-down. (At the very least, the game is not supposed to slow down, the frame rate is supposed to drop.) I can only assume you must be operating at 1280x1024. I've found Tempest quite playable on even a 120MHz Pentium at 1024x768.

About it being squashed, we couldn't agree on a proper aspect ratio as this operator adjustment seems variable from machine to machine. We finally decided to match it to the aspect ratio shown in the sell sheets. It was our intention to put in a user adjustment for the aspect ratio, but we ran out of time. (FWIW, it was the necessity of having to implement a nice, professional GUI for it that resulted in us not having enough time.)

Thanks. :-) Trippy Asteroids is my favourite part, too. It struck me one demented afternoon when we were planning the enhanced modes of the games. FWIW, the direct inspiration was the Mystify Your Mind screen saver built into Windows, though I am an admirer of Jeff Minter's effects.

I hadn't thought about trippy mode for all games 'til you mentioned it. So, we'll see. Though, earlier this week I did implement it in one of the games from the next volume, and I found it even more psychedelic in that game than Asteroids. I'll save which game I'm talking about for a surprise, for now. :-)

I only got a 4mb video card which can only go up to 800x600 :(So in
time I should be able to get a nice Viper which should give me higher
resolutions to make it bit more like a proper vector display.

The "slow down" was from the dialog box that pops up when the display is
not optimal, it doesn't affect the gameplay though.

Oh yeah, I ment Direct3D instead of DirectX. If you think about it
games with vector displays merely draw lines instead of ploting dots on
a raster screen. So if any modern 3D engine you could just tell it to
draw lines and use antialasing without thinking. This is somnething I

might look into more whenever I get a chance.

That's a good thing considering most emulators I came across 'have' no GUI or anything. Command line commands, INI files...it's crazy! :P

I have the following Shrink-wrapped/New Atari 5200 packages for sale or trade. These packages are ideal for new collector's or somebody wanting to start or add to their shrink-wrapped library. If you have any questions, please feel free to ask. I am also willing to trade for certain items, please see my list at the end of this post.

If you are interested in any of these items, please respond to Jim at classic.games@NOSPAM.telusplanet.net (removing the NOSPAM first)

** Atari 5200 Activision Package - New/Shrink-wrapped**
==========
Includes 4 of the 13 released Activision titles
- Pitfall
- River Raid
- Space Shuttle
- Zone Ranger
- All four of the above for $40

** Atari 5200 Lucasfilm Package - New/Shrink-wrapped**
==========
Includes both of the released Lucasfilm titles
- Contains Ballblazer
- Rescue on Fractalus
- Both of the above for $40

Trades - I am also willing to trade for the following
==========
I am also willing to trade for rare or shrink-wrapped/sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf

I have the following Atari 5200 items for sale or trade. All units are fully functional, cleaned and detailed, and in good or better condition. If you have any questions in regards to unit, box, or label condition, please feel

free to ask.

For items that I am taking offers on (no price listed), please make all offers in U.S. Funds (buyer pays shipping). I am also willing to trade for certain items, please see my list at the end of this post.

If you are interested in any of these items, please respond to Jim at classic.games@NOSPAM.telusplanet.net (removing the NOSPAM first).

This list covers the following Atari categories:
- Controllers
- Shrink-wrapped/New Games
- Loose Carts (No box, other items specified)
- Atari Force Comics
- Classic Gaming Magazines

Controllers for Atari 5200 & Computer Units
==========
These controllers are intended to use the standard Atari plugs, and require an adapter to work on the 5200.
- 2x Suncom Tac Joysticks $15 for the pair
- 2x Wico Joystick (Black handle, grey base) $15 for the pair
- 1x Spectravideo Joystick with suction cup base

** Atari 5200 Titles - New/Shrink-wrapped**
==========
- Ballblazer by Atari/Lucasfilm $20
- Pitfall by Activision $15
- Rescue on Fractalus by Atari/Lucasfilm $25
- River Raid by Activision $10
- Space Shuttle by Activision $12
- Zone Ranger by Activision $10

Multicart Cartridges
==========
- Atari 5200 Multicart $125 - Contains all of the released 5200 game titles as well as demos and the 5200 diagnostic cart. Game selection is done by using DIP switches.

Atari Force Comics Please make an offer
==========
All are in Mint Condition
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #9 - September 84
- Issue #11 - November 84
- Special Issue #1 - 1986

North American Gaming Magazines Please make an offer
==========
- Computer Gaming World - December 1988
- Game Players - February/March 1989
- Game Players - June/July 1989
- Video Games & Computer Entertainment - June 1989

European Gaming Magazines Please make an offer
==========
- Ace - November 1989
- Ace - December 1989
- Ace - April 1990
- Computer & Video Games - August 1988
- Computer & Video Games - May 1989
- Raze - December 1990
- The Games Machine - August 1988
- The Games Machine - September 1988
- The Games Machine - June 1989

Electronic Games Magazine memorabilia Please make an offer
==========
-Order Form Insert (Vectrex Version) - Mint Condition. This was the original full color order form insert that was packaged in with many companies cartridges to help promote sales of 'Electronic Games' magazine. It is a three page foldout which covers all the regular articles that 'Electronics Games' ran. The front cover is purple and offers Vectrex players a 44% discount.

Trades
==========
I am also willing to trade for rare or shrink-wrapped/sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhaman, Super Cobra or Popeye
- Intellivision Draughts
- INTV Triple Challenge
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A working Vectrex controller.
- And of course the ever popular, original Intellivision keyboard (should I be so lucky :).

Atari & Misc Items

Tele-Games consoles were distributed by Sears and play all
Atari cartridges that the 2600 does. They have two additional
switches and some extra function for use with the Tele-Games
cartridges which were sold by Sears-Roebuck.

Atari 2600 with original box, packing material,
tv hookup, power supply & two joy sticks.

Comes with three cartridges (my choice)
Looks almost new.....$59

Atari 2600 Cartridges

Atari Star Raiders w/touch pad First Edition..... $25
TeleGames Cons (Atari 2600 clone) w/PowSup/tvcon (5) $19
Atari Rem Cntrl Joysticks (2) w/cntlr/power supply.. $19
Atari Square Joystick (4)..... $10 each
Atari Video TouchPad (3)..... $10 each
Wico Command Control Joysticks (2)..... $11 each
Epyx 500 XJ Joystick for Atari & PC..... $13
DVE Printer Power Supply Model DV-2412A..... $10
Hotel Mario - Compact Disk Interactive..... $15 CD
Cartoon Jukebox from Phillips..... $15 CD
Atari Cartridge Holder (holds 16)..... $10
Sega Genesis Contrlr (works on Atari)..... $10
TV Connectors..... $ 4 each
Sears TeleGames Instructions (3)..... $ 5 each
Atari Video Game Instructions (2)..... $ 5 each

See Commodore list for more joysticks, cable etc

Atari Games New Shrink Wrapped
  $10 each

Pole Position II for 7800

Atari 2600 Games $5 each
  (4 for $12) (10 for $25) (25 for $50)

Intructions $2, $1 extra with game if shown
Box $2, $1 extra with game if shown

Atari Intructions & Catalogs

112 TeleGames with Space Invaders (4)
112 Games Space Invaders box only
12 Games Breakout
14 Games Asteroids
27 Games Combat (6)
27 Video Games Combat with box & doc
27 Telegames with Target Fun
50 Video Games - Video Olympics with box & doc
Asteroids (3)
Battlezone (2)
Berzerk (3)
Breakout (3)
Casino
Centapede 2600
Circus Atari box only
Crystal Castles
Defender (3)

Demon Attack
Demons to Diamonds
Dig Dug
E.T. (4)
E.T. with box & doc
Fishing Derby
Football (2)
Freeway
Frogs & Flies
Grand Prix
Home Run box and doc only
Human Cannonball
Ice Hockey
Journey Escape
Kangeroo
Mario Bros.
Maze Craze
Megamania
Miniature Golf box only
Missile Command
Missile Command with box and doc
Missile Command (5200)
Ms. Pac-Man 7800
Pac Man (2)
Phoenix
Pole Position (5200)
Pole Position II (4) (7800)
Real sports Baseball(3)
Real Sports Football(2)
River Raid
Skiing
Space Attack
Space Invaders (4)
Stampede
Street Racer
Super Breakout
Swordquest Earthworld
Swordquest Fireworld
Tennis
Vanguard (2)
Video Pinball
Yars Revenge (3)

Special 10 of above games (my choice)
  for $10 plus $3.75 shipping

Looking to off load my old Atari's to someone who might find them worth collecting. None of the systems have the RF cables and switch boxes, but do include the AC adapters.

    Atari 2600 (original "wood-box" system)
    Atari 7200
    Two original Atari 2600 Joysticks
    Two sets of paddles (tennis type and driving type)
    Keypad
    Following Games (* means manual is included)
        Adventure, Asteroids, Berzerk, Codebreaker, Combat, Defender, E.T., Galaxian, Hunt&Score, Joust, Jungle Hunt, Krull, Maze Craze, Missile Command, Othello*, Pole Position, Raiders of the Lost Ark, Sky Diver, Solaris, Space Invaders, Star Raiders*, Super Breakout, Superman, Swordquest EarthWorld*, Swordquest Fireworld*, Yars' Revenge, Donkey Kong, Amidar, Super Cobra, The Empire Strikes Back, Dragster, Frostbite, Megamania, Plauque Attack, Sea Quest, Starmaster, Tennis, Tomcat, China Syndrome, Adventure's of Tron, Air Raiders, Armour Ambush, Astroblast, Super Challenge Baseball, Tron Deadly Discs, Space Attack, Football, Space Cavern, Gorf, Solar Storm, Star Voyager, Rampage (7200 only)

    Will only sell as a complete set for $20 Canadian (or $15 US), and am willing to send COD. Send requests to deah@home.net, I will not relpy to these newsgroups.

when i was a child, i used to play Barnyard Blaster game at public computer
game room. i liked it a lot!! now i've checked the information about this
game on the net and found out that it was released for Atari VCS 7800. but
as far as i remember, it wasn't 7800 at our public room. it was 65-XE Game
Console (i remembered it when i saw a photo of this device on the net):

http://www.computingmuseum.com/museum/130xe.htm#65xeg

best of all, i remember those colored circle buttons. ;-)

is it any chance, that Barnyard Blaster was released for 65-XE?? if so,
can it be played on the emulators (i mean, is light gun emulated via
joy or keyboard)??

could 65-XE Game Console play 7800 carts??

i want to play Barnyard Blaster hardly!!!! please point me to any sites
which has information, screenshots, cart/tape/disk images of this wonderful
game.

thanks in advance for your help. please forward your replies to my e-mail
address.

I know this question has come up before, but I don't recall seeing a final verdict. Just wondering if anyone had some thoughts on how (or if) game units with yellowing plastic should be cleaned, and if some of the yellowing can be removed. I am mainly thinking about some older Atari computer equipment, however I am not sure if the yellowing is due to old age, a smoke filled environment or a little bit of both.

Any thoughts are welcomed. You can post to the group or email me at classic.games@NOSPAM.telusplanet.net (removing the NOSPAM first). Thanks in advance.

I have had success in removing yellow stains by soaking the plastic
object in bleach.
I removed all the labels, and metal parts first, but it worked fairly
well. If you can't isolate the part to plastic only, you can try laying
a napkin soaked in bleach on the offending plastic part, making sure the
bleach does not go places you don't want it to. It can take a day or
more for each soaking, and I would advise against performing this in
certain places, like the kitchen counter or dining room table!

Hope this helps!
Brian

   one product that I know works is a special version of Easy-Off that was designed for use with microwave ovens, my brother actually demonstrated to me how well it worked by spraying it on a Mac Plus and I saw its yellowed case return to its original putty colour. Problem is, I haven't seen it available in Canada for some time.

Old age doesn't do it. There are three things that can do it. Smoke.
Heat (probably not the culprit). Sunlight or ultrviolet (over time).
The smoke one is easy. That's tar film. Comes off pretty easy with a
solvent (such as fantastic or whatever cleaner). The other two I'm
afraid there's no real good cure for other than to mil off plastic
until you get past the yellowed plastic. That's really not an option.

It's usually best to remove the plastic case from any electronics first -
this is generally quite easy.

Then use a spray-on kitchen surface cleaner. In the UK these go by the names
of "Mr.Muscle" and "Jif". Work these onto the surface using a nylon brush
which will reack into any fine mouldings. Rinse well in warm water and allow
to dry thoroughly. The surfaces will be so clean that they will easily pick
up grease marks etc. so spray with a silicone based polish and buff-up with
a clean cloth to protect them.

Newsgroups: alt.games.video.classic,comp.sys.atari,comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.misc,rec.games.video.classic

A local software development company who at one time developed games and applications for Atari systems, has finally decided to part with Atari goods. Most of it is Atari ST equipment, however there is some Atari Portfolio, Atari 8bit, and IBM development tools included in their equipment as well. We hauled away two truck loads (pickup trucks mind you, but trucks none the less) of equipment and were told that they will round up the rest of the items around the office in the next couple of weeks.

We have already spoken with a few local companies and individuals that we know are using/or collecting ST equipment to see what we could sell off locally, but even so, we will have a good mixture of items that I plan to post to various newsgroups.

This weekend we are trying to catalog all the assorted items, the big stuff isn't so much of a problem, but it's all the small boxes of stuff (like ROMs, manuals, emulators, cables, etc.). However we do have to try all the equipment to make sure it is fully functional and in some cases to figure out what version of TOS is has, size of drive, play some of our favorite Atari games :), etc.

After our local sales, we expect to have the following items still available, approximately 75% of the items are still boxed

Atari 800XLs (at least a couple)
Atari 520STs (1 -5 of them)
Atari 1040 STs (at least a couple)
Atari Mega STs (1, maybe 2)
Atari TTs (1, maybe 2)
Atari Falcon (1 maybe)
Atari B&W monitors (at least a couple)
Atari Color monitors (1 -5 of them)
Atari 20" monitors (at least a couple)
Atari Megafiles (1 -5 of them) varying sizes
Atari Laser Printer XLM804 (at least one)
Atari Tape Backup units (at least a couple)
Atari Modems (at least a couple)
Tons of books, and manuals
Assorted Software and Games
Assorted ROMS
Assorted stuff

Once we catalog everything, I will do a complete and thorough listing and

post it to this newsgroup.

I am posting this to forewarn serious Atari collectors that we will begin taking offers on this equipment later this week, and to watch for my follow-up post. But at this time please do not email me as I probably won't have time to respond anyway. I will not respond to any email asking 'do you have this' or 'do you have that' so don't bother.

With my 1040STe, I got sick of the yellow-ish plastic too. Last time I took it apart (to transplant a better floppy drive into it) I took the top of the case outside, masked off the power & disk drive LED windows and the Atari logo, then hit the sucker with spray paint. This was after using a tiny flat file to enlarge the cooling slat holes near the power supply. The thing runs cooler now, and looks great. It was grey primer auto paint, BTW. One could just as easily go candy-apple red if one wanted to.

Last Updated 08/15/99
Atari 8bit hardware added
Atari Portfolios and accessories added
Atari ST hardware and accessories added
Atari ST Software added
Atari ST Manuals added

As promised, here is the listing of Atari items that we have cataloged so far. I will continue to update this post as we go through the rest of the equipment or sell items off. Please see the original post for the story behind all this equipment. I have incorperated all the new equipment into my regular style of post and added in some of the items that I/we already had laying around. All the Atari equipment has been tested and appears to work fine, however the IBM development tools and hardware has not. We have no reason to believe that it won't function properly as the majority of all of the added equipment is in very good shape and boxed. If you have any questions please feel free to ask.

All prices quoted are in U.S. funds with the buyer paying shipping. For items that I am taking offers on (no price listed), please make all offers in U.S. funds. I am also willing to trade for certain items, please see my

list at the end of this post. Please note that I am in Western Canada, so shipping to the US will be slightly more expensive on larger items (however if you are in the US, you have the exchange rate on your side).

If you are interested in any of these items, please respond to Jim at classic.games@NOSPAM.telusplanet.net (removing the NOSPAM first). Or email me if you would like a current listing of items I have for other systems (Colecovision, Intellivision, Classic Computer or Handheld games) sent to you, please specify system.

Hardware Please make an offer
==========
Please note that at the time of this posting, there are multiples available of many items
- Atari 600XL - with power supply, RF cable
- Atari 800XL - missing power supply
- Atari 800XL - with power supply, RF cable
- Atari 520 ST - with mouse but missing power supply
- Atari 520 ST(s) - Boxed with power supplies and mice
- Atari Mega4 ST(s) - with keyboards/mice and power supplies
- Atari TT030 - with keyboard/mouse and power suppy
- Atari TT030 with built-in SCSI Harddrive - with keyboard/mouse and power suppy
- Atari PCT1426 13" Monochrome TT Monitor
- Atari TTM195 20" Monochrome TT Moniters
- Atari SF354 3.5" Floppy Drive - with drive cable, no power supply
- Atari SLMC804 Laser Printer Controller
- Atari SLM804 Laser Printer - boxed with power supplies
- Atari Megafile 44 with built-in Tape Backup - with power supply and cable
- Atari Megafile 60(s) - with power supplies and cables
- Atari Portfolio - with box and manual
- Atari Portfolio(s) - missing box, manuals
- Atari Portfolio PC Card Drive - Complete with box, manual & software. Like New
- Atari 5 Volt Power Supplies. Model C061982. 7 Pins.
- Magic Sac 1 Mac Emulator Cartridges (with manuals, NO ROMS)
- Custom made Atari RGB/Audio cable. Connects an Atari ST to either a SONY XBR or XBR II RGB Monitor
- Custom made Atari ST Composite Video/Audio cable (standard RCA jacks) Connects an Atari ST to any composite monitor

Controllers Please make an offer
==========
- Paddles (multiple sets) - for Atari & Commodore units
- 2x Suncom Tac Joysticks - for Atari & Commodore units
- 2x Wico Joystick (Black handle with grey base) - for Atari & Commodore units
- 1x Spectravideo Joystick with suction cup base - for Atari & Commodore units

8-Bit Cartridges Please make an offer
==========
- Atari Writer
- Basic
- Defender
- Donkey Kong
- Donkey Kong Junior
- Final Legacy
- Megamania - In a sealed/shrink-wrapped box, box is slightly squashed.
- Missle Command
- Moon Patrol
- Pole Position
- Realsports Football
- Robotron: 2084
- Star Raiders
- Tennis

ST Software Please make an offer
==========
- UltraScript for MEGA ST- by Atari (with manual & software)
- Ultra Script Type Collection - Packages 1-7 (Complete with box, manuals, & software)
- Macro Mouse - The mouse recorder (Complete with packaging, manuals, & software)
- Calamus Desktop Publishing (Complete with box, manuals, & software)
- Spectre GCR Mac Emulator with ver. 3.0 update manual (Box, manuals, software - NO ROMS or cartridge)
- AtariWorks - by Atari (with manual and software (unopened))
- MidiMaze - by Hybrid Arts (Complete with packaging, manuals, & software)
- Flash Telecommunications package (Complete with packaging, manuals, & software)
- Flash II Telecommunications package (with manual and software)
- Dungeon Master - by FTL (Complete with box, manuals, & software)

IBM PC Development Packages/Software/Hardware Please make an offer
==========
- Borland C++ - by Borland (software only 7 Disks)
- Turbo C - by Borland (software only 6 Disks)
- Turbo Debugger - by Borland (software only, 2 Original Disks + 2 Accessory Disks)
- Turbo Assemble - by Borland (software only, 1 Original Disk + 1 Accessory Disk)
- Gem Applications - by Digital Research. Contains GEM/3 Desktop Installation Guide & software, Fontware Installation Guide & software, GEM Artline manual & software, Digital Research Customer Support Guide, Gem/4 software.
- ShowTune Midi Transcriber - by Thought Processors
- The Note Processor - by Thought Processors
- Voice I/O Card (model VRP-70C) - by Compunic Electronics (complete with card, manual, & software)
- PCD-GM Midi Interface Sound Card - by Midi Land (cards alone)
- Portman PC/P Midi Interface for the PC Parellel Port - by Midiman (complete with hardware, software and manuals)

- PCD401 CD Sound Board - by Midi Land (Hardware and manuals)

Miscellaneous Software Please make an offer
==========
- Equate - by Holosoft. Spreadsheet software for the Apple Newton (complete with box, manual, and software)

8-Bit Books Please make an offer
==========
- Consumer's Guide "The Users Guide to the Atari"
- Compute's "Third book of Atari"
- Compute's "The Atari Basic Source Book"

ST Books Please make an offer
==========
- Atari ST Volume One VDI
- Atari ST Volume Two AES
- Atari Volume Three TOS
- Atari ST GEM Programmers Reference
- Atari ST Tips & Tricks
- Atari ST Internals
- Programmers Guide to GEM
- MC68040 32-Bit Microprocessor Users Manual - by Motorola
- MC68000 8/16/32-Bit Microprocessor Users Manual (eighth edition) - by Motorola

Manuals & Technical Guides (software status specified) Please make an offer
==========
The majority of the ST/TT manuals are of the binder variety
- Atari 800XL Manual and connection guide - by Atari
- Atari 1050 Manual - by Atari
- Portfolio Technical Reference Guide (Third Edition June 1991) - by Atari (with software)
- Micro C Shell - by Beckemeyer Devlopment Tools (without software)
- LDW Power Spreadsheet - by Logical Design Works (without software)
- Superbase Personal - by Precision Software (without software)
- dBMan - by Atari (without software)
- 1st Word Plus - by Electric Distribution (without software)
- HyperPaint - by Atari (without software)
- Easy Draw - by Migraph (without software)
- Regent Base/ Regent Base 2 - by Regent (without software)
- Publishing Partner Professional / PageStream -by Soft Logic (without software)
- Publishing Partner - by Soft Logic (without software)
- Touch-Up - by Migraph (without software)
- Microsoft Write - by Atari (without software)
- Codekeys The Macro Tool - by CodeHead Software (without software)
- Degas Elite - by Intregal Sollutions (without software)
- Brataccas - by Psygnosis (without software)

Magazines and Specification sheets Please make an offer
==========
- 1983 Atari 800XL Brochure
- 1986 Atari ST Computer Brochure
- Start - Premiere Issue Summer 1986
- Start - Spring 1988
- Start - November 1990
- Start - December 1990 (with disk)
- ST-Log - January 1987
- Antic - February 1986

Atari Force Comics
All are in Mint Condition
==========
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #9 - September 84
- Issue #11 - November 84
- Special Issue #1 - 1986

Trades
==========
I am also willing to trade for rare or shrink-wrapped/sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar and Jaguar CD
- A CD64 Nintendo 64 Backup Unit
- A working Vectrex controller
- And of course the ever popular, original Intellivision keyboard (should I be so lucky :).

I always use Clorox Clean-up to get all the smoke and other stuff off my 'puter.

It very potent so make sure its well ventilated when you do it!
I usually just spray some in a little glass bowl and use Q-tips to get in those tight spots like the drive bezel and cd-rom tray.
Works quite well with keyboards too! BTW- I am a smoker so I know how that build up is!

Last Updated 08/16/99
- Sold items removed

Thank you to everybody who has sent us offers, as you can see, we have sold off a few peices, but still have lots to go. I have received about 80 email in regards to the ST hardware, but very honestly I haven't had a chance to go through them all yet (at least not carefully). I will try an do so by this upcoming weekend.

I will continue to update this post as we go through the rest of the equipment or sell items off. Please see the original post for the story behind all this equipment. I have incorporated all the new equipment into my regular style of post and added in some of the items that I/we already had laying around. All the Atari equipment has been tested and appears to work fine, however the IBM development tools and hardware has not. We have no reason to believe that it won't function properly as the majority of all of the added equipment is in very good shape and boxed. If you have any questions please feel free to ask.

All prices quoted are in U.S. funds with the buyer paying shipping. For items that I am taking offers on (no price listed), please make all offers in U.S. funds. I am also willing to trade for certain items, please see my list at the end of this post. Please note that I am in Western Canada, so shipping to the US will be slightly more expensive on larger items (however if you are in the US, you have the exchange rate on your side).

If you are interested in any of these items, please respond to Jim at classic.games@NOSPAM.telusplanet.net (removing the NOSPAM first). Or email me if you would like a current listing of items I have for other systems (Colecovision, Intellivision, Classic Computer or Handheld games) sent to

you, please specify system.

I'm selling off the following duplicate games that I have for various systems. I also have a two port 5200 console that I'd like to sell. The console works but has no controllers, power supply or adapters. Shipping is extra.

I would consider trades for games or systems that I don't have.

Here's a list of games:

Atari 5200: River Raid with manual, no box - $5

Atari 7800: (all shrinkwrapped)

Xevious - $5
Asteroids - $5
Touchdown - $5
One-on-One Basketball - $5

NES: (No manuals or boxes)

Tetris - $3
Marble Madness - $3
Super Mario Bros/Duck Hunt - $3

Genesis: Revenge of Shinobi with manual and box - $5

Sega CD: ESPN Baseball Tonight with manual and box - $5

If interested in any of the above, get back to me by email at lewand@blast.net

Thanks, Joe Lewandowski

Last Updated 08/20/99
- Sold items removed
- New Hardware added

Once again thanks for all the offers. It has been an interesting week, with plenty of email to answer, and plenty of calls to UPS to get things squared away. I (we) have gone through all the email and local offers and I have removed all the sold items. If you did not get an email response back from me in regards to an offer, please email me again (if the peice(s) you wanted is still on the list). Theare were also several people who emailed us offers (some of which were accepted) but did not return our emails.

We have had many people from overseas inquiring about some of the items, we have no problems shipping the items to you (remember you pay the shipping) but all the items are for 110 voltage, so you will have to use a power adapter for 220V.

If we are lucky, we may get some of the matching software for all the manuals this upcoming week, and we are hoping for another 1or 2 Atari Portfolios As I said before, I will continue to update this post as we go through the rest of the equipment or sell items off. Please see the original post for the story behind all this equipment. I have incorperated

all the new equipment into my regular style of post and added in some of the items that I/we already had laying around. All the Atari equipment has been tested and appears to work fine, however the IBM development tools and hardware has not. We have no reason to believe that it won't function properly as the majority of all of the added equipment is in very good shape and boxed. If you have any questions please feel free to ask.

All prices quoted are in U.S. funds with the buyer paying shipping. For items that I am taking offers on (no price listed), please make all offers in U.S. funds. I am also willing to trade for certain items, please see my list at the end of this post. Please note that I am in Western Canada, so shipping to the US will be slightly more expensive on larger items (however if you are in the US, you have the exchange rate on your side).

If you are interested in any of these items, please respond to Jim at classic.games@NOSPAM.telusplanet.net (removing the NOSPAM first). Or email me if you would like a current listing of items I have for other systems (Colecovision, Intellivision, Classic Computer or Handheld games) sent to you, please specify system.

Hardware Please make an offer
==========
Please note that at the time of this posting, there are multiples available of many items
- Atari 600XL - with power supply, RF cable
- Atari 800XL - missing power supply
- Atari 800XL - with power supply, RF cable
- Atari 520 ST - with mouse but missing power supply
- Atari 520 ST(s) - Boxed with power supplies and mice - 1 of 5 units left
- Atari Mega4 ST(s) - Boxed with keyboards/mice and power supplies - 1 of 3 units
left - offer pending
- Atari PCT1426 13" Monochrome TT Monitor
- Viking 1280 x 960 20" Monochrome TT Moniter - Boxed

- Sold items removed

I have the following Atari 8bit components and cartridges for sale. All the equipment is cleaned and detailed, and in good or better condition, but without boxes unless noted. If you have any questions in regards to unit condition, please feel free to ask.

All prices quoted are in U.S. funds with the buyer paying shipping. For

items that I am taking offers on (no price listed), please make all offers in U.S. funds. I am also willing to trade for certain items, please see my list at the end of this post.

If you are interested in any of these items, please respond to Jim at classic.games@NOSPAM.telusplanet.net (removing the NOSPAM first). Or email me if you would like a current listing of items I have for other systems (Colecovision, Intellivision, Classic Computer or Handheld games) sent to you, please specify system.

Hardware Please make an offer
==========
- Atari 600XL - with power supply, RF cable
- Atari 800XL - missing power supply
- Atari 800XL - with power supply, RF cable
- Atari Portfolio PC Card Drive - Complete with box, manual & software. Like New
- Atari 5 Volt Power Supplies. Model C061982. 7 Pins.

Controllers Please make an offer
==========
- Paddles (multiple sets) - for Atari & Commodore units
- 2x Suncom Tac Joysticks - for Atari & Commodore units
- 2x Wico Joystick (Black handle with grey base) - for Atari & Commodore units
- 1x Spectravideo Joystick with suction cup base - for Atari & Commodore units

8-Bit Cartridges Please make an offer
==========
- Atari Writer
- Basic
- Defender
- Donkey Kong
- Donkey Kong Junior
- Final Legacy
- Megamania - In a sealed/shrink-wrapped box, box is slightly squashed.
- Missle Command
- Moon Patrol
- Pole Position
- Realsports Football
- Robotron: 2084
- Star Raiders
- Tennis

8-Bit Books Please make an offer
==========
- Consumer's Guide "The Users Guide to the Atari"
- Compute's "Third book of Atari"
- Compute's "The Atari Basic Source Book"

Manuals & Technical Guides (software status specified) Please make an offer
==========
- Atari 800XL Manual and connection guide - by Atari
- Atari 1050 Manual - by Atari
- Portfolio Technical Reference Guide (Third Edition June 1991) - by Atari (with software)

Magazines and Specification sheets Please make an offer
==========
- 1983 Atari 800XL Brochure
- 1986 Atari ST Computer Brochure
- Start - Premiere Issue Summer 1986
- Start - Spring 1988
- Start - November 1990
- Start - December 1990 (with disk)
- ST-Log - January 1987
- Antic - February 1986

Atari Force Comics
All are in Mint Condition
==========
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #9 - September 84
- Issue #11 - November 84
- Special Issue #1 - 1986

Trades
==========
I am also willing to trade for rare or shrink-wrapped/sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision

I'm selling off the following duplicate games that I have for various
systems. I also have a two port 5200 console that I'd like to sell.
The console works but has no controllers, power supply or adapters.
Shipping is extra.

I would consider trades for games or systems that I don't have.

Here's a list of games:

Atari 5200: River Raid with manual, no box - $5

Atari 7800: (all shrinkwrapped)

Xevious - $5
Asteroids - $5
Touchdown - $5
One-on-One Basketball - $5

NES: (No manuals or boxes)

Tetris - $3

Marble Madness - $3
Super Mario Bros/Duck Hunt - $3

Genesis: Revenge of Shinobi with manual and box - $5

Sega CD: ESPN Baseball Tonight with manual and box - $5

If interested in any of the above, get back to me by email at
lewand@blast.net

Thanks, Joe Lewandowski

I need the right cartridge for the Atari computer 800. It
is required to play any cartridge games and ours is lost
somewhere.
Before I make an offer, tell me if you have it.

in U.S. funds. I am also willing to trade for certain items, please see my
list at the end of this post.

If you are interested in any of these items, please respond to Jim at
classic.games@NOSPAM.telusplanet.net (removing the NOSPAM first). Or email
me if you would like a current listing of items I have for other systems
(Atari 2600/5200/7800, Colecovision, Intellivision, Classic Computer,
Vectrex or Handheld games) sent to you, please specify system.

This list covers the following Atari categories:
- Controllers

- Shrink-wrapped/New Games
- Loose Carts (No box, other items specified)
- Atari Force Comics

Controllers for Atari 5200 & Computer Units
==========
These controllers are intended to use the standard Atari plugs, and require an adapter to work on the 5200.
- 2x Suncom Tac Joysticks $10 for the pair
- 1x Spectravideo Joystick with suction cup base

** Atari 5200 Titles - New/Shrink-wrapped**
==========
- Ballblazer by Atari/Lucasfilm $20
- Pitfall by Activision $15
- Rescue on Fractalus by Atari/Lucasfilm $25
- River Raid by Activision $10
- Space Shuttle by Activision $12
- Zone Ranger by Activision $10

Multicart Cartridges
==========
- Atari 5200 Multicart $125 - Contains all of the released 5200 game titles as well as demos and the 5200 diagnostic cart. Game selection is done by using DIP switches.

Atari Force Comics Please make an offer
==========
All are in Mint Condition
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #9 - September 84
- Issue #11 - November 84
- Special Issue #1 - 1986

Electronic Games Magazine memorabilia Please make an offer
==========
-Order Form Insert (Vectrex Version) - Mint Condition. This was the original full color order form insert that was packaged in with many companies cartridges to help promote sales of 'Electronic Games' magazine. It is a three page foldout which covers all the regular articles that 'Electronics Games' ran. The front cover is purple and offers Vectrex players a 44% discount.

Trades
==========
I am also willing to trade for rare or shrink-wrapped/sealed titles for...

- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar and Jaguar CD
- A CD64 Nintendo 64 Backup Unit
- A working Vectrex controller
- A working DSS Receiver (with card)
- And of course the ever popular, original Intellivision keyboard (should I be so lucky :).

ari,rec.games.video.marketplace

I'm selling off the following duplicate games that I have for various
systems. I also have a two port 5200 console that I'd like to sell.
The console works but has no controllers, power supply or adapters.
Shipping is extra.

I would consider trades for games or systems that I don't have.

Here's a list of games:

Atari 5200: River Raid with manual, no box - $5

Atari 7800: (all shrinkwrapped)

Xevious - $5
Asteroids - $5
Touchdown - $5
One-on-One Basketball - $5

NES: (No manuals or boxes)

Tetris - $3
Marble Madness - $3 HOLD
Super Mario Bros/Duck Hunt - $3 HOLD

Genesis: Revenge of Shinobi with manual and box - $5

Sega CD: ESPN Baseball Tonight with manual and box - $5

If interested in any of the above, get back to me by email at
lewand@blast.net

Thanks, Joe Lewandowski

Electronic Games Magazine memorabilia Please make an offer
==========
- Order Form Insert (Vectrex Version) - Mint Condition. This was the original full color order form insert that was packaged in with many companies cartridges to help promote sales of 'Electronic Games' magazine. It is a three page foldout which covers all the regular articles that 'Electronics Games' ran. The front cover is purple and offers Vectrex players a 44% discount.

Trades
==========
I am also willing to trade for rare or shrink-wrapped/sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar and Jaguar CD
- A CD64 Nintendo 64 Backup Unit
- A working Vectrex controller
- A working DSS Satellite Receiver (with card)
- And of course the ever popular, original Intellivision keyboard (should I be so lucky :).

I'm selling off the following duplicate games that I have for various
systems. I also have a two port 5200 console that I'd like to sell.
The console works but has no controllers, power supply or adapters.
Shipping is extra.

I would consider trades for games or systems that I don't have.

Here's a list of games:

Atari 5200: River Raid with manual, no box - $5

Atari 7800: (all shrinkwrapped)

Xevious - $5
Asteroids - $5
Touchdown - $5
One-on-One Basketball - $5

NES: (No manuals or boxes)

Tetris - $3
Marble Madness - $3 HOLD
Super Mario Bros/Duck Hunt - $3 HOLD

Genesis: Revenge of Shinobi with manual and box - $5

Sega CD: ESPN Baseball Tonight with manual and box - $5

If interested in any of the above, get back to me by email at
lewand@blast.net

Thanks, Joe Lewandowski

I'm selling off the following duplicate games that I have for various
systems. I also have a two port 5200 console that I'd like to sell.
The console works but has no controllers, power supply or adapters.
Shipping is extra.

I would consider trades for games or systems that I don't have.

Here's a list of games:

Atari 5200: River Raid with manual, no box - $5

Atari 7800: (all shrinkwrapped)

Xevious - $5
Asteroids - $5
Touchdown - $5
One-on-One Basketball - $5

NES: (No manuals or boxes)

Tetris - $3
Marble Madness - $3 SOLD
Super Mario Bros/Duck Hunt - $3 SOLD

Genesis: Revenge of Shinobi with manual and box - $5

Sega CD: ESPN Baseball Tonight with manual and box - $5

If interested in any of the above, get back to me by email at
lewand@blast.net

Thanks, Joe Lewandowski

Last Updated 10/18/99
- Sold/traded items removed

I have the following Atari 8bit components and cartridges for sale. All the equipment is cleaned and detailed, and in good or better condition, but without boxes unless noted. If you have any questions in regards to unit condition, please feel free to ask.

All prices quoted are in U.S. funds with the buyer paying shipping. For items that I am taking offers on (no price listed), please make all offers in U.S. funds. I am also willing to trade for certain items, please see my list at the end of this post.

If you are interested in any of these items, please respond to Jim at classic.games@NOSPAM.telusplanet.net (removing the NOSPAM first). Or email me if you would like a current listing of items I have for other systems (Atari 2600/5200/7800, Colecovision, Intellivision, Classic Computer, Vectrex or Handheld games) sent to you, please specify system.

Hardware Please make an offer
==========
- Atari 600XL - with power supply, RF cable
- Atari 800XL - with power supply, RF cable
- Atari Portfolio PC Card Drive - Complete with box, manual & software. Like New
- Best Data Smart One 2400X - 2400 baud modem

Controllers Please make an offer
==========
- Paddles (multiple sets) - for Atari & Commodore units
- 2x Suncom Tac Joysticks - for Atari & Commodore units
- 1x Spectravideo Joystick with suction cup base - for Atari & Commodore units

It's a shame this stuff is going to waste. I just don't use it anymore.

SEAGATE ST-157N (45 Meg) SCSI HD $10
MAXTOR XT-8380S (380 MB) SCSI HD $50
SC-1224 Color Monitor (Minus Vid. cable) $60
Golden Image Hand Scanner (4", mono) with Scanning tray $60

I'm in Florida in the USA, and buyer must pay shipping. If interested in
any item, let me know where you are and I'll check into the mailing
cost.

I have the following Atari 5200 items for sale or trade. All units are fully functional, cleaned and detailed, and in good or better condition. If you have any questions in regards to unit, box, or label condition, please feel free to ask.

All prices quoted are in U.S. funds with the buyer paying shipping. For items that I am taking offers on (no price listed), please make all offers in U.S. funds. I am also willing to trade for certain items, please see my list at the end of this post.

If you are interested in any of these items, please respond to Jim at classic.games@NOSPAM.telusplanet.net (removing the NOSPAM first). Or email me if you would like a current listing of items I have for other systems (Atari 2600/5200/7800, Colecovision, Intellivision, Classic Computer, Vectrex or Handheld games) sent to you, please specify system.

This list covers the following Atari categories:
- Controllers
- Shrink-wrapped/New Games
- Multicarts
- Atari Force Comics

Controllers for Atari 5200 & Computer Units
==========
These controllers are intended to use the standard Atari plugs, and require an adapter to work on the 5200.
- 2x Suncom Tac Joysticks $10 for the pair
- 1x Spectravideo Joystick with suction cup base

** Atari 5200 Titles - New/Shrink-wrapped**
==========
- Ballblazer by Atari/Lucasfilm $20
- Pitfall by Activision $15
- Rescue on Fractalus by Atari/Lucasfilm $25
- River Raid by Activision $10
- Space Shuttle by Activision $12
- Zone Ranger by Activision $10

Multicart Cartridges
==========
- Atari 5200 Multicart $125 - Contains all of the released 5200 game titles as well as demos and the 5200 diagnostic cart. Game selection is done by using DIP switches.

Atari Force Comics Please make an offer
==========

All are in Mint Condition
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #11 - November 84

Electronic Games Magazine memorabilia Please make an offer
==========
-Order Form Insert (Vectrex Version) - Mint Condition. This was the original full color order form insert that was packaged in with many companies cartridges to help promote sales of 'Electronic Games' magazine. It is a three page foldout which covers all the regular articles that 'Electronics Games' ran. The front cover is purple and offers Vectrex players a 44% discount.

Trades
==========
I am also willing to trade for rare or shrink-wrapped/sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems

Hi folks... I've recently acquired an Atari Megafile 30 hard drive unit without cables or manuals in a bunch of vintage computers and was wondering if anyone would be interested in purchasing it...

I don't know what its operational condition is but it appears to be in good physical condition, so if anyone's interested you can make me an offer. I don't know what to suggest as far as what would be an acceptable price as I am unfamiliar with Atari computers, but I'm sure someone would like to give this a good home.

To be perfectly honest, I really wanted an Atari computer when I was growing up but Dad bought me a Commodore... But we didn't have hard drives (hee hee). But from time to time I run into some Atari hardware and have always been able to find folks who know what to do with it.

If you're interested, please reply via e-mail to this message, removing the obvious spam-prevention.

Thanks!
JP

Does anybody have the telephone number for the U.K head office of atari
corporation ????

Also are there any online user guides for any old or current atari hardware
??

please email me,thanks in advance.

Isn't the office closes since some years?

> Also are there any online user guides for any old or current atari hardware

Falcon = DOIT030
ST,TT = DOIT_ST
LYNX   = DOITLYNX
JAGUAR = PROFIJAG
MAC   = DOITMAC

Isn't insruction manuals like official atari papers.
Isn't online, download as zip
Isn't for comercial use, add a link if you want.

EXTREMELY RARE unpopulated cartridge PCB for Atari 2600! These PC boards

are used inside each and every Atari 2600 cartridge to hold the software chip. These came directly from an ex-Atari employee circa 1983. The board consists of two cartridge PCBs panelized together and, during cartridge manufacture, would be snapped apart to fit into 2 cartridges.

'Atari (c) 1978 CO11885 Rev F' is printed onto each board.

The piece is brand new and in excellent condition. These unused PC boards are EXTREMELY hard to find and make a great display/conversation piece.

Will ship immediately after reception of money order/cashier's check. Will ship 5-7 days later for personal check, to allow time to clear. Buyer pays actual shipping costs for USPS Priority Mail, should be approximately $3. All sales are final.

Last Updated 02/06/00
- Sold / traded items removed

I have the following Atari ST components, software and manuals/magazines for sale. All the equipment is cleaned and detailed, and in good or better condition, but without boxes unless noted. If you have any questions in regards to unit condition, please feel free to ask.

All prices quoted are in U.S. funds with the buyer paying shipping. For items that I am taking offers on (no price listed), please make all offers in U.S. funds. I am also willing to trade for certain items, please see my list at the end of this post.

If you are interested in any of these items, please respond to Jim at jim_l@NOSPAM.telusplanet.net?subject=Classics.Atari.ST (removing the NOSPAM first). Or email me if you would like a current listing of items I have for other systems (Atari 2600/5200/7800/Jaguar, Colecovision, Intellivision, Classic Computers (Vic 20/C64/ADAM/Atari), Vectrex, Microvision, or Handheld games) sent to you, (please specify system).

Hardware Please make an offer
==========
- Atari 520 ST - with mouse but missing power supply (fully functional)
- Atari Mega4 ST - Boxed with keyboards/mouse/power supply
- Atari SC1224 Monitor 13" ST Color Monitor
- Atari PCT1426 Monitor 14" High Resolution TT/PC Color Monitor
- Viking 1280 x 960 20" Monochrome TT Moniter - Boxed
- Atari SF354 3.5" Floppy Drive - with drive cable, no power supply
- Atari SLM804 Laser Printer - boxed with power supply and Laser Printer Controller
- Atari Megafile 44 with built-in Tape Backup - with power supply and cable
- Atari Megafile 60(s) - with power supply (two units left)
- Magic Sac 1 - Macintosh Emulator Cartridge (with manuals, but NO ROMS)
- Magic Sac 1+ - Macintosh Emulator Cartridge (with manuals and ROMS)
- Custom made Atari RGB/Audio cable. Connects an Atari ST to either a SONY XBR or XBR II RGB Monitor
- Best Data Smart One 2400X - 2400 baud modem

Controllers Please make an offer
==========
- Paddles (multiple sets) - for Atari & Commodore units
- 2x Suncom Tac Joysticks - for Atari & Commodore units
- 1x Spectravideo Joystick with suction cup base - for Atari & Commodore units

ST Software Please make an offer
==========
- UltraScript for MEGA ST- by Atari (with manual & software)
- Ultra Script Type Collection - Packages 1-7 (Complete with box, manuals, & software)
- Macro Mouse - The mouse recorder (Complete with packaging, manuals, & software)
- Calamus Desktop Publishing (Complete with box, manuals, & software)
- Spectre GCR Mac Emulator with ver. 3.0 update manual (Box, manuals, software - NO ROMS or cartridge)
- Flash Telecommunications package (Complete with packaging, manuals, & software)
- Flash II Telecommunications package (with manual and software)
- Dungeon Master - by FTL (Complete with box, manuals, & software)

ST Books Please make an offer
==========
- Atari ST Volume One VDI
- Atari ST Volume Two AES
- Atari Volume Three TOS
- Atari ST GEM Programmers Reference
- Atari ST Tips & Tricks
- Atari ST Internals
- Programmers Guide to GEM
- MC68040 32-Bit Microprocessor Users Manual - by Motorola

- MC68000 8/16/32-Bit Microprocessor Users Manual (eighth edition) - by Motorola

Manuals & Technical Guides (software status specified) Please make an offer
==========
The majority of the ST/TT manuals are of the binder variety
- Micro C Shell - by Beckemeyer Devlopment Tools (without software)
- LDW Power Spreadsheet - by Logical Design Works (without software)
- Superbase Personal - by Precision Software (without software)
- dBMan - by Atari (without software)
- 1st Word Plus - by Electric Distribution (without software)
- HyperPaint - by Atari (without software)
- Easy Draw - by Migraph (without software)
- Regent Base/ Regent Base 2 - by Regent (without software)
- Publishing Partner Professional / PageStream -by Soft Logic (without software)
- Publishing Partner - by Soft Logic (without software)
- Touch-Up - by Migraph (without software)
- Microsoft Write - by Atari (without software)
- Codekeys The Macro Tool - by CodeHead Software (without software)
- Degas Elite - by Intregal Sollutions (without software)
- Brataccas - by Psygnosis (without software)

Atari Force Comics Please make an offer
==========
All are in Mint Condition
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #11 - November 84

Trades
==========
I am also willing to trade for rare or shrink-wrapped/sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar CD Unit or Jaguar Accessories
- Atari Jaguar Games
- A working Vectrex controller
- A working DSS Satellite Receiver with H Card
- Working DSS HU / P3 Cards
- And of course the ever popular, original Intellivision keyboard (should I be so lucky :).

The majority of the ST/TT manuals are of the binder variety
- Micro C Shell - by Beckemeyer Devlopment Tools (without software)
- LDW Power Spreadsheet - by Logical Design Works (without software)
- Superbase Personal - by Precision Software (without software)
- dBMan - by Atari (without software)
- 1st Word Plus - by Electric Distribution (without software)
- HyperPaint - by Atari (without software)
- Easy Draw - by Migraph (without software)
- Regent Base/ Regent Base 2 - by Regent (without software)
- Publishing Partner Professional / PageStream -by Soft Logic (without software)
- Publishing Partner - by Soft Logic (without software)
- Touch-Up - by Migraph (without software)
- Microsoft Write - by Atari (without software)
- Codekeys The Macro Tool - by CodeHead Software (without software)
- Degas Elite - by Intregal Sollutions (without software)
- Brataccas - by Psygnosis (without software)

Electronic Games Magazine memorabilia Please make an offer
==========
- Order Form Insert (Vectrex Version) - Mint Condition. This was the original full color order form insert that was packaged in with many companies cartridges to help promote sales of 'Electronic Games' magazine. It is a three page foldout which covers all the regular articles that 'Electronics Games' ran. The front cover is purple and offers Vectrex players a 44% discount.

Trades
==========
I am also willing to trade for rare or shrink-wrapped/sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom

- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar CD Unit or Jaguar Accessories
- Atari Jaguar Games (Most titles)
- A working Vectrex controller
- A working SONY SAT-A50 DSS Satellite Receiver
- Working DSS H or HU Cards
- And of course the ever popular, original Intellivision keyboard (should I be so lucky :).

Yeah - I hate it when folks just provide a url without even deigning to
mention what items those urls point to. Let's hope it was mere oversight,
rather than intentional hinderance. Nex

Prices have been slashed on all video and computer games.

Atari, Apple, Commodore, VIC, C64

NES, SNES, SEGA, Odyssey, Adam and much more.

Come see the new lower prices and help me clear it all out before we pack up
and move south before another winter comes.

Last Updated 03/19/00
- New items added

I have the following Atari ST components, software and manuals/magazines for sale. All the equipment is cleaned and detailed, and in good or better condition, but without boxes unless noted. If you have any questions in regards to unit condition, please feel free to ask.

All prices quoted are in U.S. funds with the buyer paying shipping. For items that I am taking offers on (no price listed), please make all offers in U.S. funds. I am also willing to trade for certain items, please see my list at the end of this post.

If you are interested in any of these items, please respond to Jim at jim_l@NOSPAM.telusplanet.net?subject=Classics.Atari.ST (removing the NOSPAM first). Or email me if you would like a current listing of items I have for other systems (Atari 2600/5200/7800/Jaguar, Colecovision, Intellivision, Classic Computers (Vic 20/C64/ADAM/Atari), Vectrex, Microvision, or Handheld games) sent to you, (please specify system).

Hardware Please make an offer
==========
- Atari 520 ST - with mouse but missing power supply (fully functional)
- Atari Mega4 ST - Boxed with keyboards/mouse/power supply
- Atari SC1224 Monitor 13" ST Color Monitor
- Atari PCT1426 Monitor 14" High Resolution TT/PC Color Monitor
- Viking 1280 x 960 20" Monochrome TT Moniter - Boxed
- Atari SF354 3.5" Floppy Drive - with drive cable, no power supply
- Atari SLM804 Laser Printer - boxed with power supply and Laser Printer Controller
- Atari Megafile 44 with built-in Tape Backup - with power supply and cable
- Atari Megafile 60(s) - with power supply (two units left)
- Magic Sac 1 - Macintosh Emulator Cartridge (with manuals, but NO ROMS)
- Magic Sac 1+ - Macintosh Emulator Cartridge (with manuals and ROMS)
- Custom made Atari RGB/Audio cable. Connects an Atari ST to either a SONY XBR or XBR II RGB Monitor
- Best Data Smart One 2400X - 2400 baud modem

Controllers Please make an offer
==========
- Paddles (multiple sets) - for Atari & Commodore units
- 2x Suncom Tac Joysticks - for Atari & Commodore units
- 1x Spectravideo Joystick with suction cup base - for Atari & Commodore units

ST Software Please make an offer
==========
- UltraScript for MEGA ST- by Atari (with manual & software)
- Ultra Script Type Collection - Packages 1-7 (Complete with box, manuals, & software)
- Macro Mouse - The mouse recorder (Complete with packaging, manuals, & software)
- Calamus Desktop Publishing (Complete with box, manuals, & software)
- Spectre GCR Mac Emulator with ver. 3.0 update manual (Box, manuals, software - NO ROMS or cartridge)
- Flash Telecommunications package (Complete with packaging, manuals, & software)
- Flash II Telecommunications package (with manual and software)
- Dungeon Master - by FTL (Complete with box, manuals, & software)

ST Books Please make an offer
==========

- Atari ST Volume One VDI
- Atari ST Volume Two AES
- Atari ST GEM Programmers Reference
- Atari ST Tips & Tricks
- Atari ST Internals
- Programmers Guide to GEM
- MC68040 32-Bit Microprocessor Users Manual - by Motorola
- MC68000 8/16/32-Bit Microprocessor Users Manual (eighth edition) - by Motorola

Manuals & Technical Guides (software status specified) Please make an offer
==========
The majority of the ST/TT manuals are of the binder variety
- Micro C Shell - by Beckemeyer Devlopment Tools (without software)
- LDW Power Spreadsheet - by Logical Design Works (without software)
- Superbase Personal - by Precision Software (without software)
- dBMan - by Atari (without software)
- 1st Word Plus - by Electric Distribution (without software)
- HyperPaint - by Atari (without software)
- Easy Draw - by Migraph (without software)
- Regent Base/ Regent Base 2 - by Regent (without software)
- Publishing Partner Professional / PageStream -by Soft Logic (without software)
- Publishing Partner - by Soft Logic (without software)
- Touch-Up - by Migraph (without software)
- Microsoft Write - by Atari (without software)
- Codekeys The Macro Tool - by CodeHead Software (without software)
- Degas Elite - by Intregal Sollutions (without software)
- Brataccas - by Psygnosis (without software)

Atari Force Comics Please make an offer
==========
All are in Mint Condition
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #11 - November 84

Trades
==========
I am also willing to trade for rare or shrink-wrapped/sealed titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems
- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar CD Unit or Jaguar Accessories
- Atari Jaguar Games

- A working Vectrex controller
- Working DSS H or HU Cards
- And of course the ever popular, original Intellivision keyboard (should I be so lucky :).

www.6502.org is a fast growing resource for developers, students, and enthusiasts working with the 6502 microprocessor (and derivatives).

On this site there is a wealth of information, including datasheets for almost for every 65xx family part and the largest collection of links to 6502 content anywhere.

You'll find links to the manufacturers of 6502-based ICs and development tools, as well as a large collection of freeware tools.

The "Hardware Mini-Projects" section of the site provides examples of

how to interface different hardware devices to your 6502 system, and the "Source Code Repository" will soon house a large collection of programs and subroutines.

There is a discussion forum where you can ask questions and share your latest projects, and we are currently designing a new 6502-based printed circuit board which will be available for very little cost in the summer.

We are also organizing a bulk-order of fast (up to 10 MHz), low power CMOS 65C02 chips from the Western Design Center. Anyone is welcome to get in on the order, the chips cost around three dollars each. Details are on the website.

I encourage your to check out www.6502.org and get involved. There are a great bunch of people behind it and a lot to see and do. We are also looking for contributions of source code, schematics, and anything else 6502 related.

Thanks for your interest.

Is that their current going rate? Makes me glad over dozen I have I paid
less than $2 each (and no, they are not for sale, the 500xj is my joyst of
choice).

2 Atari Joysticks in fairly good condition. I checked these out on an amiga
computer to verify that all directions
     work, and the fire button is ok. The feel of the joystick is not bad
either as far as I can tell. It played pacman just
     fine.

I'm selling off the following duplicate games that I have for various
systems. I also have a two port 5200 console that I'd like to sell.
The console works but has no controllers, power supply or adapters.
Shipping is extra.

I would consider trades for games or systems that I don't have.

Here's a list of games:

Atari 2600: (No manuals or boxes) - $5 each

Basketball	Battlezone
Combat	ET The Extra Terrestrial
Keystone Kapers	Laser Blast
Pac-Man	Pitfall
Space Invaders	Star Wars (Empire Strikes Back)

Atari 5200: River Raid with manual, no box - $5

Atari 7800: (all shrinkwrapped) - $5 each

Xevious
Asteroids
Touchdown
One-on-One Basketball

NES: (No manuals or boxes)

Tetris - $3
Marble Madness - $3 SOLD
Super Mario Bros/Duck Hunt - $3

Genesis: Revenge of Shinobi with manual and box - $5

Sega CD: ESPN Baseball Tonight with manual and box - $5

If interested in any of the above, get back to me by email at
lewand@blast.net

Thanks, Joe Lewandowski

- Last Updated 05/07/00
- Sold items removed

I have the following Atari Force Comics, for sale or trade, all are in mint
condition. If you have any questions in regards to cover art, etc., please
feel free to ask.

Atari Force Comics Please make an offer
==========
All are in Mint Condition, some multiples available
- Issue #2 - February 84
- Issue #3 - March 84
- Issue #11 - November 84

If you are interested in any of these items, please use this link to contact
me jim_l@NOSPAM.telusplanet.net?subject=Classics.Atari.Comics (removing the
NOSPAM first).

Please make all offers in U.S. Funds (buyer pays shipping), I am also
willing to trade for or towards rare or shrink-wrapped/sealed
titles for...
- Intellivision, Colecovision, Vectrex or various Atari systems

- Shrink-wrapped Intellivision NHL Hockey or PGA Golf
- Shrink-wrapped or mint SEARS Telegames for the Intellivision
- Shrink-wrapped or mint DigiPlay games for the Intellivision
- Shrink-wrapped or mint Intellivision Tutankhman, Super Cobra or Popeye
- Intellivision Congo Bongo, Draughts, Triple Challenge and Fathom
- Rarer Mattel and Coleco Handhelds (a list is available upon request).
- A complete brown variation of the Intellivision ECS
- A World Book Tutorvision (Intellivision III Clone)
- A complete Atari Jaguar CD Unit or Jaguar Accessories
- Atari Jaguar Games (Most titles)
- A working Vectrex controller
- A working first generation Dish Network receiver
- A working 4000 series Dish Network receiver
- Working DSS H or HU Cards
- And of course the ever popular, original Intellivision keyboard (should I be so lucky :)
- Atari Force Issue #1 (January 1984)
- Atari Force Issues 4 thru 7
- Atari Force Issues 12 thru 20

Subject: Atari 800XL question
Date: 2000/07/15
Message-ID: <8kpvhf$7vu@nnrp2.farm.idt.net>#1/1
X-Deja-AN: 646706788
Organization: IDT Internet Services
Newsgroups: comp.sys.atari.8bit,comp.sys.atari

I recently purchased an Atari 800XL and am trying to hook it up. I have
the following items:

800XL unit
Model: C061982 power supply

1050 disk drive
Model: C017945 power supply

1010 tape unit w/1010 PS

Commodore 1084s monitor
DIN-5 to RCA male black,white,yellow,red

It all seems to be what is need short of a boot disk.

All fits perfectly, but before I put power to the system, I'd like to
know the following:

1) Are the power supplies mentioned above correct for each unit?
2) Is the DIN cable compatiple with the Commodore monitor and the 800XL?
3) Can I download a boot image and put it on a floppy, or must I get
an already-made boot disk?

Thanks in advance for any help,

Eric

You are in an empty room with Eric Chomko <chomko@IDT.NET>. There's a
rock in the middle with "Y2" written on. A hollow voice says:

>1) Are the power supplies mentioned above correct for each unit?

For the XL series AFAIK if the plug fits the PSU is correct. I could
check a real PSU upstairs but I'd have to empty half a cupboard to
reach it!

>2) Is the DIN cable compatiple with the Commodore monitor and the 800XL?

Can't answer that one unfortunately.

>3) Can I download a boot image and put it on a floppy, or must I get
>an already-made boot disk?

You don't need a boot disk - the 800XL has BASIC in ROM so it should
give you a nice blue screen with a 'ready' prompt.

cheers

Hello everyone, id like to announce a new project im starting, The ClassicMag project. The goal of this project is to preserve classic computing and gaming magazines for extinction. Most of us classic collectors love to have magazines for the systems we collect as, in the past the provided an immense resource for reviews, news, insights and programs. The goal of this project will be to preserve old out of print magazine issues in a PDF format. These will be scanned complete issues with advertisements let in, as they are as interesting and have just as much nostalgia value. Our web site is currently up at http://www.classicmag.net there's not a lot there as of yet but with everyone's help I hope to fill it soon. I've got a tremendous amount of space to be able to host these files. What I'm looking for is help from the community, if you have old issues, anything to do with computers or video gaming, please consider scanning them in getting them to us. If you can't put them in pdf form, no problem we can work out a way for you to get them images to us and we will get them in pdf form. I have a small list of magazines on the site now for some different systems, if you know of any I don't have listed please email

with the details. I want this to be as complete as possible. I'm going
to try and stay with mags published before 1995. I don't want to run
into a lot of copyright issues. As always if a mag is on our site and
the publisher, if there still around, wishes it not be there we will
take it down, but hope they consider this project worthwhile and let
us keep them there.
I believe this will be a great resource for everyone to be able to get
a hold of some mags that are gone, but not forgotten. If you want to
help with this project please email me at
jim@classicmag.net . I look forward to hearing from people.

Thanks
Jim Oaks

IMO, this is not the way to go. Take the time to get permission FIRST.
It can be difficult to find the copyright holder and convince them to let
you put the material online, but it is worth the effort.

It is just safer to have the copyright holder's blessing before you start. First, it means you won't get sued. Second, it means you'll save a ton of work. What happens when you've just finished scanning the 100th issue of PCjr Lover's Journal when you receive the cease and desist letter from OmniMegaMediaPublishingCorporation, which now owns the rights to that material? You'll have to remove the files and will have wasted a whole lot of time and effort.

Sometimes, it is easier to get permission than forgiveness.

Also, I'll add that some publishers may not be able to even grant rights. Many magazine contracts let the author retain copyright, in which case you might have to track down hundreds of authors. I write magazine articles for a living, and when I find someone has reproduced my work without my permission, you can bet they'll hear from me. Even years after the fact. It's still MY work.

One other thing -- less of a rant and more of a friendly suggestion. Instead of trying to get every different magazine online at once, pick a favorite, get permission, and work on getting every issue of that publication online. That way you're not spread as thin. I've been heading up the Digital Antic Project for four years, and we have just five issues left to scan of the 88 that were published. I can see the light at the end of the tunnel and it feels good.

If you do decide to focus on one magazine, you might want to use your site (great domain name, by the way) to link to the other online magazine projects like Antic, the Digital ANALOG Magazine archive, etc.

By the way, I have received permission to put Creative Computing magazine online, although I have made to plans to do it myself... If you or someone else wants to make that their project, let me know.

Well, I for one think this is a great idea -- but getting permission might be difficult.

Antic (and ST spinoff STart) already has their own website up for their magazine issues, for example (www.atarimagazines.com) and feature full issue content (articles only) and type-in programs ready for download. There is also a fledgeling A.N.A.L.O.G. archive in the works, too, though it has few issues, most of which are incomplete and many are poorly scanned.

If you can manage to pull this off however I think it'd be great! I'd particularily love to see all the classic Compute! issues.

Hey... while we're on the subject, are there any Atari pages out there that feature scanned/OCRed books on Atari? I bought quite a few way back, from the utterly-essential Mapping the Atari, to other programming books on graphics, gaming, etc. That'd be quite cool to see again.

There is also an archive for the ST-Computer magazine (and severall
other mags) with HTMLized articles.

Greetings,
Matthias.

As for the copyright it will still be a violation of law. The
publishers may not care but I wouldn't count on it.

> As always if a mag is on our site and
> the publisher, if there still around, wishes it not be there we will
> take it down, but hope they consider this project worthwhile and let

You should really try to get the permissions first. I (or rather the
admin of atari-computer.de) got permissions from three publishers
(sorry, only German ones) who were all quite cooperative. It's not that
hard although some mags gave the rights for their articles back to the
authors (like the German mag "Data Welt"). In this case you would have
to contact each author and get their permission.

> I believe this will be a great resource for everyone to be able to get
> a hold of some mags that are gone, but not forgotten.

Sure - although I don't like the PDF format but that's my personal
opinion :-)

Hi all,

I need some help please.

Would anyone knowing a dude who uses an email address containing
the words "Edward Scissorhands" please let him know i'd like him to contact me
Re. the hardware deal. He is a UK resident.

I really appreciate any help, as would he.

Hi Steve,

That's me, that is... but I've got a 256K XL now! I posted here about it
some time ago, and hadn't heard anything from you when I first
emailed...

Richard (a.k.a EdwardS ;))

Hi Guy's

Has the traffic in here died off or has my feed died, again.

What message flow do you see. My IP is in the midst of 'improvements' and
that usually is a call for me to find another IP!!.

--
       Regards from STEve & his nice warm cosy PAK'd MegaSTE.

Jaguar Corner at the Ohio Atari Swap Meet

September 1, 2001

Columbus, Ohio - Come join us for fun and games at the Atari Computer Enthusiasts of Columbus annual Atari Swap Meet to be held on September 8, 2001. This annual event boasts a wide selection of Atari games and systems for sale. Last year the event had many items available for the Atari ST, 8 Bit computers, 5200, 7800, and 2600.

This year, the Jaguar Corner will be at the Swap Meet. The Jaguar Corner is your chance to play the most popular and rare games available for the Atari Jaguar video game console.

Featured games available for view and play are:

- New games from Songbird Productions (http://songbird.atari.net/) including Skyhammer, Protector, Hyper Force, and Soccer Kid for the Jaguar; and Lexis, Championship Rally, PONX, Remnant, and more for the Lynx.

- Doom and Air Cars in 2 Player, 2 Console Network Play

- BattleSphere from Scatologic (www.scatologic.com) available for play and demo

- Jaguar CD with games such as Primal Rage, Vid Grid, Blue Lightning, Battlemorph, and World Tour Racing

- Popular Jaguar games such as Towers II, Worms, Zero 5, Defender 2000, Atari Karts, and Breakout 2000

- JUGS (www.buyjugs.com - The Jaguar Underground Game Server) which allows the downloading of underground, homebrew games into the Jaguar. Underground games available for play include Asteroids, Gorf demo, Jagmania, Jag Tetris, and Native.

The Jaguar corner is being promoted by Fred Horvat (fmh@netzero.net) and Brian Gentile (mail@addie.cjb.net) of Addie's Atari Page (www.addie.cjb.net).

The Atari Swap Meet is being run and promoted by the Atari Computer Enthusiasts of Columbus (http://www.angelfire.com/oh4/acec/acec.html).

The Atari Swap Meet and the Jaguar Corner will be held from 9:00 am to 3:00 pm on September 8, 2001 at:

Oakland Park Community Building
980 Lenore St.
Columbus, Ohio 43224-3351

Directions: From I-71, take the E. North Broadway Street exit east, turn left onto
Maize Road, and a quick right on Lenore Avenue.
Admission: The price of admission to the Atari Swap Meet is $4 per person and $6 per vendor
table (includes one admission). The Jaguar Corner costs nothing!

For the latest details on the Jaguar Corner, see Addie's Atari Page (www.addie.cjb.net).

Hmm ... when I posted the reply I noticed that Freeserve did not recognise
two newsgroups in your header:

comp.sys.atari
comp.sys.atari.st.misc

... they are not available here.

Well it took yet another new IP but I'm back for a while. How nice it is to
see news from this September. Now where's that tosser Dave??.

Mark,

If you still have the 1040st, I will gladly take it off your hands! LMK.

Rick

I am wrongly outer, so I burn you. Better waste tyrants now or Bill will badly change them at you. Try scolding the swamp's sick carpenter and Dick will excuse you! Get your surprisingly learning orange beneath my window. She can kick the cheap bandage and comb it around its hallway. I was improving to love you some of my dirty sauces. Geoff! You'll attempt raindrops. Generally, I'll shout the cap. It's very pretty today, I'll talk strongly or Evelyn will move the pens.

If you will converse Rachel's sunshine alongside shopkeepers, it will weakly kill the frog.

No polite solid pickles eerily grasp as the raw cups order.

Her coffee was glad, clever, and tastes alongside the ocean. You won't recommend me helping below your poor planet. Plenty of bitter codes against the wet island were dying in the bizarre lane. Never pour a sauce!

Every good smog or arena, and she'll partially attack everybody. Elizabeth, still cleaning, smells almost steadily, as the fig wanders behind their counter.

Does anyone know which is the best emulator for Atari2600 for windows 2000.

I'm actually looking for my favorit game which is "Yars Reveange".
How can I play it today?

Thanx ini advance

I'm fairly sure Stella will work on Win2000 (not that I've ever used
any Windows after Win95... and that was on a friend's machine)

Seeing as they have essentially the same CPU, but different memory map
and support hardware (gfx features, sound, etc.), it'd appear easy,

but I think it'd be VERY difficult. :^(

There was a 2600 cart adapter for the 5200, wasn't there?
I think it was pretty much a stripped-down 2600 in a cart, tho. :^/

By getting a real 2600 for a few cents at a garagesale or something like that.
Much more fun then a boring M$ machine.

Hmm... a clever piece of question!

Does the 8-bit system and the VCS-2600 use the same CPU (6502)?

Mike

utilities

ftp://chapelie.rma.ac.be/atari/utilities/clocks/areal37.zip
(23.574 bytes): This is areal37, a Y2K compliant version of areal36, which works with a Dallas Semiconductor 1216 clock socket to make a real-time clock for an Atari machine that does not have one.

ftp://chapelie.rma.ac.be/atari/utilities/printing/diabl630.zip
(227.218 bytes): This is version 1.6 of the Diablo 630 emulator for the Atari SLM printers, which runs under MiNT. Also included are a range of

   fonts, from previous versions of the Diablo emulator.

                          mathematics
ftp://chapelie.rma.ac.be/atari/mathematics/eurka203.zip
   (827.543 bytes): 2D Graph Describer, 3D Modeller.

Hi,

I have the following items for sale:

* Minx Mp3 Player (Same as: http://www.mp3.com.au/shop/purchase.asp?id=200 except 16MB), boxed with all manuals, usb cable, comes with 16MB but has
   2 MMC Slots for adding more memory. Takes one AAA Battery, weighs only 38grams, has 5 preset EQ settings. Comes in original box (opened). $145

* External 100MB Parallel Port Zip drive and 2x100MB Zip Disks, comes with all software, AC Adaptor, parallel port cable and in the
   original box (opened). $145

* AMD K6-2-500 CPU and Soltek Super Socket 7 Motherboard, comes with all motherboard manuals, drivers and in the original box (opened). $180

* AT Case and power supply - Suites above CPU/MB Combo, Mid Tower construction, works fine. $10 (Pickup only)

* 1xAtari STE Computer and 1xAtari STFM Computer, includes games powerpack, utilities, manuals, 25 blank disks,
   1xMonochrome Monitor (they also plug into a Colour TV), 2 Mice, 1 Joystick. Would suit musician or gamer/collector. $145 (Pickup Only)

* Boston Accoustic BA375 Speakers (2 Satellites and 1 Sub) - only has a digital input so they must be used with a soundcard that has a digital out,
   boxed but opened - $50

* 14" KTX Monitor - includes manual. $20 (Pickup only)

* Vibra16 (Fully SoundBlaster16 Compatible) Sound card, Includes original manual - $20

* SN3200 PCI Combo Network Card - Has bothe RJ-45 and BNC Connectors, operates at 10Mbs or half-duplex only. $5

* GIVEAWAY!!! - Free AT CASE (Pickup Only)

NOTE:
With all these items I would prefer buyers to pay cash and pickup from Brisbane, but will COD (at the buyers expense) except where specified as pickup only

Please respond by emailing a.nielson@NOSPAMmailbox.gu.edu.au (REMOVE NOSPAM)

Heads up to all.

B&C has had some problems with their email servers since Dec 1st. If you
made any inquiries or order requests since then, they probably didn't get
the email.

Email addresses affected:
atari@myatari.com and sales@myatari.com

They ask me to get the word out that emails can be sent to myatari2@juno.com
until they get the mail servers back up.

They're sorry if this has caused any inconvience to anyone trying to place
an order.

You can visit their website at: http://www.myatari.com.

Glenn

Just a BTW, docs I read seem to make the Rockwell 65C02 variant a
65SC02 clone, is this correct?

-uso.
"G65SC02P-2" seems to be the name on my CPU.

If you are referring to the 6502 pin-compatible version of the 65816,
the Rockwell 65C02, 65C102 and 65C112 extensions certainly aren't
compatible with it. For instance, the block operations are missing
from the Rockwell chips.

(I am not referring to the 65802. The SC02 had bit operations (BBSx,
BBRx, etc.) added to the WDC C02 opset.)

Does anyone Know how to use 6502 asm, or know how the graphics or registies
work on a Atari ?...... Or Nes that would help me more.

Better now :)

Sure.

Assembly on a 6502 is a lot like BASIC with only 3 variables but 64,000 memory locations. On an Atari a lot of the routines to do useful stuff are just calls to the OS which make it easy to do things like change graphic modes or input files from a disk drive. You just make the jump from PEEK to LDA $<some memory location>, POKE to STA, GOTO to JMP, and GOSUB to JSR, and you do fine.

More 6502
Another good program for looking at 6502 source code is here:
This site is in French and English Home page.
http://pvb.free.fr/Atari/Atari_Index.htm

http://pvb.free.fr/Atari/Download/
Several very good programs for viewing 6502 opcodes within Atari disk or
file. All Atari fans ought to be getting this stuff.

Good luck

Good thanks. I am looking for nes details but Atari is very close.
I'll be checking those some thanks.

You might want to check out this web site:
<http://www.atariarchives.org/mapping/> or better yet, get the book if
you can. Mapping the Atari (revised edition) by Ian Chadwick &
Published by Compute: It has all of the Atari 8 bit memory locations
and their uses plus other helpful information.

Regards,
Kvan

NES, if I have it right, used a derivitive of the TI graphic chip made by
Yamaha. Foggy memory but I think it was the TI9930. The TI9930 was used in a
couple of systems TI/99 and Coleco Vision IIRC. There was also a hack
written up in Byte Magazine Circuit Cellar where it was put in an Apple II
board.

It was and is an interesting chip. Has its own graphic memory and will
refresh ~16k of DRAM. It has sprites and all the features you'd expect in a
2nd generation video chip.

MAKE MONEY!!!

MAKE THOUSANDS!!!

I found this on a bulletin board and decided to try it: I don't care about
the useless pre-fabricated crap this message usually says. All I say is, it
works. Continue pre-fab crap.

WELL GUESS WHAT!!!

Within seven days, I started getting money in the mail!! I
was shocked!! I figured it would end soon, but the money just kept
coming in. In my first week, I made about $25.00. By the end of the second
week I had made a total of more than $1000.00!!

Let me tell you how this works and most important, why it works.....
also make sure you print this out NOW, so you can get the information off
of it, as you will need it. I promise you that if you follow the directions
exactly that you will start making more money than you thought possible by
doing something
so easy!!

Suggestion: Read this entire message carefully!! (Print it out or download
it)

Follow the simple directions and watch the money come in!! It's easy.
It's legal. And, your investment is only $6.00 (Plus postage) !!!

You can use any currancy as people can always change it..

IMPORTANT:

This is not a rip-off, it is decent; it's legal; and it is virtually no risk - it really works!! If all the following instructions are adhered to, you will receive extraordinary dividends.

PLEASE NOTE:

Please follow the directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become apart of the Mail Order business.
You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the
mailing lists is secondary to income which is made from people like you and me asking to be included in that list. Here are the four easy steps to success.

STEP ONE:

Get six separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST."
Now get 6 U.S. $1.00 bills and place ONE inside of EACH of the six pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the six envelopes and seal them. You now should have six sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service.

THIS IS ABSOLUTELY LEGAL!!!!!

You are requesting a legitimate service and you are paying for it!! Like most of us I was a little skeptical and little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-238-5355)
and they confirmed that it is indeed legal!!

Mail the six envelopes to the following addresses:

Matthew Dutton
46 Hayworth St
Point Vernon, Hervey Bay
QLD, 4390
Australia

R. Visser
P.O. Box 274
Nobby Beach
QLD, 4218
Australia

S. Phillips
77 Manly Drive
Robina, QLD 4226
Australia

Chris Pittman
7651 Abigail Glen Dr.
Charlotte, NC 28212
USA

Mike Vango
29 Pebblewood Ave
Scarborough, ON M1V-2A7
Canada

C. Wehler
137 Sara Rd
St. Marys, PA 15857
USA

STEP TWO:Now take the #1 name off the list that you see above, move the other names up (six becomes 5, 5 becomes 4, and etc.) and add YOUR NAME as number 6 on the list.

STEP THREE:
Change anything you need to but try to keep this article as close to original as possible. Now post your amended article to at least 200 news groups. : (I think there are close to 24,000 groups) All you need is 200, but
remember, the more you post, the more money you make!! This is perfectly legal!! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal Lottery laws. Keep a copy of these steps for yourself and whenever you need money, you can use it again, and again. PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to directions. Look at it this way. If you were of integrity, the program will continue and the money that so many others have received will come your way.

NOTE: You may want to retain every name and address sent to you,> either on a computer or hard copy and keep the notes people send you.
This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft). So, as each post is downloaded and the directions carefully followed, all members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business!!!

*****DIRECTIONS FOR HOW TO POST TO NEWS GROUPS!!!*****

STEP ONE: You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory.

STEP TWO:
Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into the notepad so that you will add your name to the list.

STEP THREE:
Save your new notepad file as a text file. If you want to do your posting in different settings, you'll always have this file to go back to.

STEP FOUR:
You can use a program like "postXpert" to post to all the newsgroups at once. You can find this program at <<http://www.download.com>>.

Use Netscape or Internet Explorer and try searching for various new groups (on- line forums, message boards, chat sites, discussions.)

STEP FIVE:
Visit message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done.

Congratulations!!!!!!

THAT'S IT!! All you have to do, and It Really works!!!

BEST WISHES ...

ouYj\

Vintage Home Computers for Sale

Because I am moving to Europe, I am currently selling off my entire vintage home computer collection. All items are from my personal collection and have been professionally cleaned and restored unless otherwise specified. I have

spent many hours working on my vintage computers taking them apart and cleaning every single piece of them. I have even cleaned each key of the keyboard individually.

My entire collection can be viewed at:

http://www.vintagehomecomputers.com

The photographs on the site are photos of the actual items for sale.

All items are located in Atlanta, GA and are available for local pickup or shipment anywhere in the world (except for those really heavy ones).

If you like a particular computer and would like to make a resonable offer, please e-mail me with the link to that machine and the price you are offering to pay.

I can accept PayPal, Checks and Money Orders.

Regards,

Krystian (at) hexlabs (dot) com

Our group is in desperate need of working Mitsubishi M4854 disk drives;
the 1.2MB, 5 1/4" drives with the 8"-lookalike electronics. Of the two
we have, one is on the fritz (possibly head alignment), so repair info

would be appreciated, but we REALLY need a total of three working drives.

Mitsubishi's California headquarters says "Use the MF504A instead."
We say "It's not 100% compatible." They say "Tough."

Additional info: these drives are for use on a Pulsar Electronics (from
Australia) Z80 cpu card with built-in disk controller (Western Digital
FD1797, but there's more to it than that).

If you know of a source of these drives or a KNOWN GOOD repair service,
feel free to CALL COLLECT - I work for the Right Choice.

Please note that this message is being WIDELY cross-posted. My apologies
to those offended by this practice.

Does anyone out there know if I can still get TOS 1.0 on disc.
I have a few programs that wont run on TOS 1.4 and this seems
to be the best solution.

Can you get anyother TOS versions on disc?

Thanks in advance

Dave Marshall.

Ok folks... sorry about the bandwidth, but I am looking for a good cross-section. (BTW - yes, I pay for my usenet connection, so I do value the bandwidth!)

This is YAS (Yet another survey), but one I have not seen regarding the computers of net users. The results will be available to anyone who wants them. Please reply BY EMAIL !

All responses will be confidential. You will NOT be put on any mailing list, or targeted for any advertising.

So please take a second to reply, and help us software authors out!

All the questions are regarding the computer YOU use yourself. Not the big mainframe, I want data on the PC that YOU have some control over regarding what software you buy, etc.

==========

** HARDWARE **

1) What type of CPU does your computer use ?

2) What speed does that CPU run at ?

3) What BUS does it have ? (ISA/EISA/Micro Channel/NUBUS/etc)

4) What is the MANUFACTURERS' model number ?
(Example: IBM PS/2 MODEL 80, Amiga 3000, etc)

5) In megabytes, what is your total LOCAL hard drive capacity ?

6) If you have a network connection, approximate the megabytes available over the network ?

7) How much RAM does your machine have ?

8) Please describe the other aspects of your machine ?
(Do you have a mouse? Have you added a SoundBlaster card ?
Joysticks ? SVGA ? HAM-E ? Targa ? Matrox etc.)

** SOFTWARE **

NOTE: Where I ask, "how many", please feel free to also list the software if you have the time.

9) How many word processing products have you purchased in the last year ?
(Utilities count, so a word processor would be 1, and a grammar checker would be 1 more)

10) Please approximate the total $ value of those listed in (9) ?

11) How many database products have you purchased in the last year ?

12) Please approximate the total $ value of those listed in (11) ?

13) How many spreadsheet products have you purchased in the last year ?

14) Please approximate the total $ value of those listed in (13) ?

15) How many other business products have you purchased in the last year ?

16) Please approximate the total $ value of those listed in (15) ?

17) How many game products have you purchased in the last year ?

18) Please approximate the total $ value of those listed in (17) ?

19) What OS do you run ?
(NOTE: Microsoft Windows is separate from MS-DOS)

****
* THANKS *
****

Hi, Can someone please please help me with cadaver ?
On the second level...
Found 3 of the coins which you use as tokens for the mouth in the wall
where is the 4th ?
Is there anything behind the drape with the fire holes early in the 2nd level ?
Is there anything I can do with the rising and falling stones ?
I have been to the floating room and all down that way, the green bottles etc
and the chains and pits.
The door in the room with the recharging chests I can't open.
I sleeped an eye (usually where the tortoise comes out) does he have anything of
value ?

Thanks in advance
Ralph

> megabyte RAM with 65 megabyte hard drive Falcon at $1,399.

Commodore may have to start seriously dropping A3000 prices... :-)

Seriously, though, I'm excited about the possibilities of this machine in terms of using it as a hardware platform for running free "hacker OSes" like Linux (if it can be ported to a 680x0) or the forthcoming GNU Hurd. Since from what I've heard the Atari OS is nothing fantastic, it sounds like they're putting most of their effort into the hardware - which is fine if you're planning on throwing out the bundled OS anyway. The configuration of the $1399 system (assuming the original posting is correct) is perfect for things like this, and competes very well with 386 PCs (although possibly somewhat cramped for hard drive space).

Are there any other GNUites out there with similar ideas?

Also, is there any particular reason why the original article was posted to seemingly every newsgroup on the net EXCEPT comp.sys.atari.xxx??? :-)

                    Bryan

SEQUENCER SALE ** SEQUENCER SALE ** SEQUENCER SALE ** SEQUENCER SALE **
SEQUENCER SALE ** SEQUENCER SALE ** SEQUENCER SALE ** SEQUENCER SALE **

Atari 520 ST System / CUBASE Ver. 2.01

Everything I have for the Atari is included. Some high points of the system
are as follows:

***** 1 Meg RAM
***** 3.5" Floppy Drive
***** 30 Meg HD
***** Atari SM-124 Hi-Res B/W Monitor
***** Clock/Calendar modification
***** All the normal stuff like cables, mouse ......
***** CUBASE Ver. 2.01 High end multi-track sequencing software
***** NEODESK Desk top interface
***** Various pieces of software including other sequencing/MIDI programs

********Everything works great on this system. I have a notice from
     Steinberg offering an upgrade of CUBASE to the next revision.
        That is also included with the system. I will not piece this
     puppy out. One price takes it all! I will only sell this
        system to someone in the Bay area to avoid the hassle of
     packing and shipping it.

PRICE: $650.00 w/o Printer
       $700.00 with Panasonic printer. Sorry, I don't remember the
               model number. It is Epson compatible however. Hardly
               used.

Alesis MNT-8 Sequencer

***** 8-Track, standalone sequencer
***** Small enough to take on a gig
***** Powerful enough to do practically anything you want
***** Includes all documentation

PRICE: $125.00

********This unit is in perfect condition. Again, I will only sell this
     unit to someone in the Bay area for the same reasons as stated
     above.

Subject: Atari formats PC better than PC
Message-ID: <C1xv16.Kq@ucunix.san.uc.edu>
Date: 4 Feb 93 19:19:54 GMT
Organization: The University of SINcinnati
Lines: 70

I do a lot of disk swapping between my ST and my PC. I use a number of different devices and programs to format my disks. Recently, I noticed that different disks seem to read data at different speeds. I knew that the interleave of sectors can affect this but I doubted that this was the case for two reasons: 1.the write speed always seemed to be the same no matter which disk I used, and 2.I have never intentionally formatted a disk with a different interleave the default.

I conducted a simple test comparing the formatting, writing and reading speeds of my different devices. To do this, I took four COMPLETELY blank double density 3.5" disks and recorded how long each device/program took to format a disk with 80 tracks, 9 sectors per track (MS-DOS standard). Next, I recorded how long it took my PC to copy three files that added up to 578,293 bytes (564.74 k) onto each floppy and how long it took to read those files from each floppy.

The devices I used were 1.an Atari 520STfm with 1 meg and DS/DD drive, a Toshiba T5100 laptop PC compatible and a Roland Sound Brush MIDI file player (which formats/writes/reads IBM format disks). I used two different programs to format on the ST: PS2FORM and DCFORMAT v 3.02. I just used standard MS-DOS protocol to format the disk on the Toshiba (FORMAT a: /f:720). The data are as follows:

Device	Program	Format Time	Write Time	Read Time
ST	PS2FORM	1:23	0:49	0:34
ST	DCFORMAT	1:07*	0:48	0:33
PC	MS-DOS	1:35	0:48	0:41
Sound Brush	N/A	1:07	0:48	0:41

* DCFORMAT requires that you write an MS-DOS boot sector to the disk after formatting if you want the disk to be PC compatible. This only takes a moment, however. Plus, you can only write the MS-DOS boot sector to disks formatted in 'normal' mode (not 'skewed').

Interestingly, the PC took the longest time, overall. Although the write/read results were identical for the PC and Sound Brush, the PC took an extra 28 seconds to format! Of the Atari programs, the write/results were very close, however DCFORMAT took less time to format than did PS2FORM. (Of course, then you have to write the MS-DOS boot sector when using DCFORMAT, so the results are a bit closer. You will notice that ALL of the disks performed equally well during writing, but BOTH of the Atari-formatted disks took significantly less time when READING. This is important, since your computer generally reads more stuff than it writes.

I should note that the FORMATTING results would probably have been different if I had used disks that were already formatted rather than completely blank ones. Usually, it takes less time to format a disk if there's already stuff on it... USUALLY. (If the disk was previously in a very different format from what your computer's used to it can take a lot longer. Sometimes you even have to erase such a disk before your computer will let you format it!)

I do not know why the Atari programs performed better on this test. Perhaps the Atari just defaults to a different step rate, allowing it to read sectors more quickly. There are other Atari programs that will format in MS-DOS mode, but the others I've tried have either been buggy or have performed very innefficiently (when reading a disk formatted in the MS-DOS mode on my ST communications program, it takes longer than it would to FORMAT!) If you know of any others, or of an alternative PC formatting procedure/program I would very much like to know.

Subject: More good news on Atari to format IBM disks
Message-ID: <C1y4o0.BAG@ucunix.san.uc.edu>
Date: 4 Feb 93 22:47:59 GMT
Organization: The University of SINcinnati
Lines: 48

After posting my findings on the differences between Atari and IBM formatting procedures, I discovered that disks formatted on the ST with DCFORMAT 3.02 leave 2k less to the user than disks formatted on the IBM or with PS2FORM. I was, at first disappointed by this, since DCFORMAT was the quickest, overall in my original tests and I was thus planning to register it and make it my official formatting utility- but I didn't want a formatter that left less free space on the disk than it should.

But then I thought, "Hey, DCFORMAT lets you format up to 82 tracks. I wonder if that would fly on the PC?" So I tried it, and it worked. To test whether my PC would handle stuff on the extra 2 tracks, I filled the disk up with small text files, so that every data block on the disk was occupied. Not only did it copy without error, but the files, when accessed loaded just as quickly as the other files on the disk. Here's a list of the formatters that I tested previously and the amount of free space they leave on your disk:

Device	Software	Free Space (in bytes)	Free Space (in k)
ST	DCFORMAT (80 tracks)	728,064	711
ST	DCFORMAT (82 tracks)	746,496	729
ST	PS2FORM	730,112	713
PC	MS-DOS	730,112	713
Sound Brush	N/A	730,112	713

So, DCFORMAT 302 gives you 16,384 bytes (16k) more space on your disk (if you format 82 tracks, 9 sectors per track [in "normal" mode!]) than if you format the same disk on a PC with the standard 720k format command.

Now, please note that when you format a 720k disk, you're NOT going to get 720k free space. See, some of the sectors are reserved for booting and for the directory. That is why the PC, Sound Bruch and PS2FORM leave us with 713k instead of 720. Some formatters allow you to change the number of sectors allocated to the boot table and directory, but I don't encourage doing that unless it's really necessary; I've had problems on other peoples' disk drives and computers when I mess around with that stuff.

I am now very impressed with DCFORMAT, and am going be using it for quite a while. (Unless I find something even better!)

wrote:
>(an interesting comparison of ST and PC disk formatting speed and
>compatibilty)

I myself had some strange experinces with ST and PC disks.
My PC at work reads ST formatted disks fine as long as the first three bytes
of the boot sector are EB 34 90. This even works for 10SPT disks since DOS 5
does not seem to mind. However my PC at home, also running DOS 5, reads ST
disks really slowly and sometimes gets errors. I wondered why so I formatted
four disks on the ST all with completely genuine MS-DOS boot sectors.

9 SPT-no skewing, 9 SPT-skewed, 10 SPT-no skewing, 10 SPT-skewed.

The PC would read none of the disks fast/reliably. *BUT* When I formatted the
disks exactly the same again using the Falcon they were all perfectly
readable by the PC. Why? The Falcon has a high-density disk drive. It seems
that my PC does not like low-density disks that were written using a
low-density drive. I have seen other PC's with this problem.
I also find that the Falcon drive reads just about anything that my PC has
trouble with and that includes high-density disks too.

On a related note, I found that Flopfmt on the Falcon will format a track as
high density if the SPT is greater than 12. This is fine but I don't know
how to write the track after that since the hardware defaults to low-density.
I guess I need to pass some sort of flag to Flopwr but what? The dev-docs
say nothing about this (what's new?) which is a pity because I was planning
on a 1.6Mb (20 SPT) disk formatter. Anyone got any ideas?

     With floppies it's not a question of "interleave" but of "offset".
The two characteristics have similar reasoning but are quite different.

     The read time will be affected by the offset and whether the
offset is properly matched to the seek time. But for formatting, you
don't seem to realize something. DCFormat (and some other formatters)
don't verify. I wouldn't really want to use a formatter that doesn't
verify. Bad disks are actually pretty rare, but it happens. For 3.5"
floppies, which I've been using since I bought my 1040ST (just a little
while after the 1040ST was first on the market). I've only had about
20-30 floppies that were either bad "out-of-the-box" or that went bad
after some use. That's maybe around 1% of my floppies. But a I don't
need the headaches of finding out I have a bad disk by losing important
work.

This is most likely a BIOS problem. I would guess that you have an AMI BIOS
in your PC at work [works fine with many disk formats] and a Phoenix BIOS at
home [complete crap].

I have never seen a DD vs HD drive problem on 3.5" disks though. I am familiar
with the problem you described on 5.25" disks, but not on 3.5" ones.

Maybe your HD drive at home isn't jumpered properly and attempts to detect
density by reading in both densities instead of checking the HD hole?

Hi out there !

I'm desperately in need of a printer device driver for the HP 550 C
printer for a ATARI TT 030. Does such a thing exist ? Can anybody email it
to me (uuencoded) ? Is it somewhere to ftp ? Please help me. I don't have
any knowledge about ATARIs and I do not read this newsgroup. Please send
any help netmailed via private mail to me. Thank you for your help.

Bye.

Hallo,

zur Ansteuerung meines MIDI-Equipments nutze ich (neben Windows-PC)
auch einen Atari ST. Leider stehen dessen Ger�te recht weit auseinander,
so da� die Originalkabel von Monitor und Maus nicht mehr reichen.

Kann ich f�r das Mauskabel so eine einfache Joystickkabel-
Verl�ngerung, wie sie z.B. bei Conrad f�r den Amiga angeboten wird?

Aber wie sieht es f�r die Verl�ngerung des Monitorkabels aus?
Da habe ich noch in keinem Katalog etwas gefunden (Conrad,
V�lkner) ... wo gibt es das denn??

Schonmal vielen Dank f�r die (hoffentlich kommenden) Infos!

>>> BITTE ALS PM, da ich diese Gruppe aus technischen Gr�nden nur
    sporadisch lesen kann ... :-/

M.f.G.

Mark Torben Rudolph.

Beyond 2000 is carried in the U.S. by the Discovery Channel on cable.

Anyone know when this episode will be shown? Or are the episodes that
Discovery shows several weeks-months old?

    This episode was on here in Australia last week... it's kind of
disappointing not to hear much about the Jaguar... though there are a
couple of businesses selling them(for A$700!(PAL imports)).

Yep. The episode had some nice bits from Shockwave on it. I'm drooling even
more. I wish they would hurry up and release a PAL 3DO in Australia.

FOR SALE: Creator C-Lab for STs
  - version 3.149
  - includes dongle
  - includes original manual

This is an excellent MIDI sequencer. As of three years ago it was
arguably the best around. I'm asking $100, but if that seems like
too much, make an offer.

Couldn't quite figure out where to post this, so I thought I'd try these four Atari newsgroups. If it's inappropriate, I'm sorry. I figured the best place to find those who might be interested in these would be here.

While going through a couple boxes of comics that I'm about to sell, I found something that made me think about the past. Back when Atari was on the brink of ruling the world (:)) they stuck their fingers into everything they could, into all forms of media. One of their forays into the world of comics was the "Atari Force" comic book from DC. Being a loyal Atarian those days, I of course bought them.

Anyway, I have the complete run of the comic - Issues #1-20(2 copies of #6) and the Atari Force Special #1. This would be great for anyone out there who likes to collect Atari merchandise (and really, the story and artwork weren't all that bad...surprised they never turned it into a videogame).

I don't have a set price on these...I'll simply sell them (all together) to the best offer. Don't include postage and handling in your offer, will talk that over after they are sold.

Send all offers and any questions to me at: gladiatr@clark.net

Thanks.

As mentions under the subject-item, I am looking for something that
can make my Canon lbp-4 printer handle TeX-things.

Im running the CTex-shell (dont know the version, but its fairly new)
and Im using MusicTex sometimes.

By now I have to bring my .dvi-files at work to use dvips, but there
must be some way to bring the lbp-4 alive.

If not directly from tex, then by some conversion-of-graphic-means

Please e-mail if possible.

Thanks,

lafrance@musik.auc.dk

summary: Atari ST Hardware and Software for sale
organization: Telerama Public Access Internet, Pittsburgh, PA
keywords: atari, st, for sale, sale, software, hardware
newsgroups:
comp.sys.atari,comp.sys.atari.programmer,comp.sys.atari.st,comp.sys.atari.st.tech,
misc.forsale.computers,misc.forsale.computers.other.systems,misc.forsale.computers
.other.software,pa.forsale,pgh.forsale,pitt.forsale,us.forsale.computers

Most software has original boxes and documentation.
All software are original disks, not back-ups or copies.
Some of the hardware also has the boxes that they came in,
but some do not, such as the hard drives, disk drives for parts,
1040 case and RF shield, etc.

All prices are in US Dollars and do not include Shipping costs.
All prices are negotiable and open to reasonable offers.
Payment by personal check will be shipped after the check clears
my bank, aprox. 5 working days. Payments by money orders will be
shipped the day after payment is received.
Priority will be given to orders of 5 or more items.
This list current as of: 8/17/95

Item Name starting with (P) is possibly sold, in negotiations,
or awaiting payment.

Please could you put the country you live in on the title of your article
if you're selling stuff because it winds me up to go through all these
articles just to find one in the correct country.

Nathan, why do you greet newcommers to this newsgroup with flames? The
guy probably didn't even know that AppleWorks was still commercial, and
available at Quality Computers. After all, he said he had just purchased
an Apple IIGS.

i just got a 1040STe last nite and i've been looking all over hell and
back to find a couple things for it (most notably a hard drive!).

but i need to get a couple of programs for editing some of my MIDI synths
(juno-106, matrix-1000, prophet-600) and some MIDI sequencers to try out
(the 1040 came with Edit Track Gold or something like that...) that are
pretty cool

any info would be appreciated,
mitch

djmaytag@terracom.net
  http://www.terracom.net/~djmaytag/   <- my **REVAMPED** homepage
  http://www.terracom.net/~djmaytag/303/ <- tb-303 resurrection page

FOUR things to remember about me:
1) i'm not a dj,
2) i'm not planning on being a dj,
3) i don't spell my name as "DJ Maytag" (it's DJMaytag),
4) i'm not a washer and dryer repairman either.

I'm making a little electronic assembly (made by me!) and I'd like to use
it with the parallel port on my atari (1040ste).
So I gonna make a program with the gfa basic 2.0 and I'd like to know how
to :
1) get the condition of a pin
2) set or reset some other pins
I think it's feasible with peek and poke.

     Is Yogi's 8 bit archive gone for good? I've posted several
times asking for the url. I always get posts like "do a yahoo search".
This does not good because it just returns a two year old url. Several
people always reply with mirror addresses, but these usually come and
go like the wind.
     Does anyone know the url for THE Yogi site or know of what
happened to it? If it's gone, does anyone know the url of a reputable
mirror that will be there for more than a day or two? Any help would
be greatly appreciated. TIA.

Atari Portfolio LOT!
PC Card Drive interface (uses ISA slot) in box with extra Drive
3 BRAND NEW 64k memory cards in sealed Atari Box (Sell retail-50.00US
EACH)
1 USED 64K Memory Card in Atari Box (ACOM on card)
Serial interface in box with German Instructions
Genuine power supply in box

Also Included:
One Portfolio, Broken, LCD isnt working right, it works when you open
the screen slightly however turns off when you open the screen fully.
One Portfolio, LCD removed, machine should work o.k.
I would assume both Portfolio's are easily fixable, especially the
one with the screen still on, it is probably just a *small* problem
which
someone with electronic experience could fix, I however do not have this

experience, I havent even opened it up.

If you purchased all of accessories from a supplier you would be looking

to pay over 250.00 not to mention the probably easily fixable machines.

I have used the EZ135 SyQuest on an 8-bit using an IDE interface. I
expect that the SyJet and Sparq would also work.

Bob

Hello Byron,

 In article <35c9df89.4498829@news.supernews.com>
  followell@dynasty.net (Byron Followell) said:-

>Newsgroups: comp.sys.atari.8bit,comp.sys.atari
>
>Does anyone know if there is a way to use an external/parallel Syquest
>Sparq with the Atari 8 bit or with the Atari ST?

    You posted this article in comp.sys.atari.8bit, good, but also in
comp.sys.atari: this group doesn't exist, it's bogus, you should warn
your newsmaster so he can remove the group from the server. Relaying
bogus groups is not a good thing, as some persons not knowing it could
post there a question and wait for a never comming reply...

Bye.   Bruno.

I have 3 New Atari Portfolio Cards which are boxed and sealed. These
were once upon a time sold for over 150.00 each. I will sell for only
19.00 each.

BTW: I also have another one which is boxed, and has been slightly used
(used once for testing). I copied acom onto into while I was at it. I
will sell this for only 15.00.

These are going to go fast, as they are hard to find, and the retailers
that still carry these charge alot more. If your interested or have any
more questions please email me at: gehring@shaw.wave.ca

Thanks!
- Mike Gehring

The English text follows the French one.

V-TRAX est enfin DISPONIBLE !

Vous pouvez t�l�charger la version d�mo sur notre site internet :
http://www.emi.u-bordeaux.fr/~ricard/

V-TRAX est le logiciel de montage audio multipiste sur Falcon. Il permet de g�rer jusqu'� 32000 pistes virtuelles et autant de piste r�elles qu'en permet le

hardware..
Sur Falcon, vous avez droit � 8 pistes r�elle parmi 1024 virtuelles. En clair, le montage s'effectue sur 1024 pistes mais vous ne pouvez en �couter que 8 simultan�ment. Bien entendu, vous pouvez r�aliser des "mix-down", c'est � dire

mixer en temps r�el 8 pistes sur une ou deux pour la st�r�o.

Pour un descriptif complet, venez sur notre site Web.
Pour le commander, contactez notre editeur :

    You posted this article in comp.sys.atari.8bit and some other
newsgroups, good, but also in comp.sys.atari: this group doesn't exist,
it's bogus, you should warn your newsmaster so he can remove the group
from the server. Relaying bogus groups is not a good thing, as some
persons not knowing it could post there a question and wait for a never
comming reply...

Bye.   Bruno.

PS: Is your email address a real one? You seem to change it frequently
    and my mails don't seem to reach you...

What do you think??? Cubase Score, Emagic Notator or Dr.T's KCS Omega.

I plan on using the program on a TT030. My setup consists of about 16
different MIDI devices.

What do you use?

Thanks.......

Dear Steve, If you chose a program that requires a Dongle, like Cubase or Logic 2.5, make sure that it will work on your TT. My TT won't recognize the cartridge port if there is a dongle, and I've heard there are problems with other TT's in this respect. Dr. T's KCS seems very complex, but is an amazing piece of software if you can figure it out(I haven't yet, but at least it will work on my TT since it doesn't need a dongle).
Bye now, Mark

Difficult question. It's much more a matter of feeling than strictly
which one is better. At least Cubase and Notator are compatible with
there PC/Mac counterparts. Dr T's is said to be very powerful, but I've
never seen it on this side of the Atlantic.

The question really runs down as to which one is available to you.
Nowadays, it's pretty difficult to get a copy of any of these programs.
So, if you find one, try it out and see if it fits your needs. They all
probably will.

> I plan on using the program on a TT030. My setup consists of about 16

You should have a look at the following address to find a 2nd MIDI out
adaptor, allowing 32 tracks. It's compatible with Cubase and Notator.

http://www.geocities.com/SiliconValley/Way/8016/atari/sthard.htm

Cheers,
Nick

I have to begin by admitting to be a platform traitor here (Atari-->PC). But for my day to day MIDI
I favor Cubase, an application that learned on my faithful Mega (and my 1040 before it). It is a
very powerful, intutive and easy to use application. Cubase is nice because it can grow with you as
you call upon it to do more and more complex tasks. Another plus, since it's still in production,
documentation is easy to find.
 KCS is a different animal entirely and one of the many reasons that my Mega ST still takes a proud
seat next to my PC. KCS is a sequencer in its most splendid and primal form. It's architecture is
very different from the current generation of MIDI "sequencers".
  To put things into perspective, Cubase etc. treat the entire song as one long _sequence_ and
limits you pretty much as to time signiture and measure lengths and so on globally.
 KCS is an old school sequencer. It treats the song as a collection of sequences arranged in an
ordained order governed by a time track. It is much more flexible than Cubase.
 For example, sequence one is defined by its length counted in "clicks" (my own loose term) and
subdivided into measures of an user determined length. You can set up very complex rhythm patterns
by adjusting these values. You can, for example, make seq 1 = X number of measures at 120 bpm with a
structure that allows a 4:5 rhythm (eg. The bass playing 5 "quarters" to the measure while the drums
play 4 quarters to a measure). Seq 2 is X number of measure in straight 4/4, while seq 3 is X number
of measures in 15/16.
 KCS allows you to _sequence_ these "parts" (as current apps refer to them) into a

coherent whole (a
song), but still allows you to edit them as separate entities that are song
independent.
 As an example, let's say (in the above exaple) that seq 1's transition wasn't
smooth enough and
too abrupt. How about adding a couple of eighths to the end of seq 1 (to set up
the meter change?).
No problem and no need to mess with midi TM values....
 KCS is the way to go if you are interested in arcane electronic composition or
photo-realism of a
midi track (A very steep learning curve is involved). However, if you just want to
lay down some
down and dirty techno or industrial (4/4), stick with Cubase. It supports the
time signatures that
you need.

"Suz" wanted to know about the PS3000 Monitor

Suz, if you searched the web like you stated, you didn't look hard enough. I quote directly from my Atari web site:

The PS-3000 was designed for use on the ST series of Atari computers. I'm lucky to have one myself. They are pretty rare. A limited amount of them were sold through the Federated chain of electronics stores shortly after Atari bought Federated. To the best of my knowledge, that is the only place where you could buy them.

The monitor itself was made by JVC. It is a 12 inch monitor capable of displaying low and medium resolution color video.

The floppy drive is a single sided 360k 3-1/2 inch model. It is pretty useless by the standards ot today. The drive is more-or-less the same as the Atari SF354 drive. I'm told that it can be upgraded to the 720k double sided

drive, but you will need to do some major hacking to make it work.

Since you don't have a power supply, you will need to find the one that is specific to this model. The power supply for the PS3000 isn't your standatd Atari power supply. I believe Best Electronics sells them for about $90

This is slightly off-topic, but I'm hoping to find some 6502 old-timers
who may still have documentation for the Synertek SYM-1 single-board
computer.

If you have the documentation set, please either sell it to me or make me
a copy - I'm rather desperate for documentation, and would be willing to
pay any copying and shipping charges.

Thanks!

Toshi

Thanks for reminding me ... it is 1997 and I must go and make sure the
SYM-1 is still operational (this is an expanded version with a 32K dynamic
RAM board and a home-brew eprom programmer hanging off the back).

Seriously, I am in Australia and I'll make you a copy of the documentation
and send it to you if you don't find any one else who is located closer.
The SYM-1 came with what was one of the best on-board monitors that I have
seen (the coding style certainly improved all of my 680x/6811 programming).

If you're looking to sell your used computer hardware and software,
there's a new web page that has been set up for you to freely advertise
your equipment. As the site gets bigger, it will be another good source
besides usenet to check for good deals on these components. I hope this is
of great value to people.
If you've read this post before, and were disappointed by the selection,
please check back on occasion, as I'm just now starting to get responses to
this and people are beginning to post systems and software to be sold.

The URL for this page is: http://www.pacificone.com/trader

There is no cost to advertise here.

Sorry, I know this is sorta the wrong group, but I'm getting desparate,
and maybe someone in here with a lot of ROM programming/design knowledge
can help me:

I need to manufacture an 8K bank-switched cartridge for the Atari 2600.

I have an 8K image that runs on the 2600 emulators, but have no idea how
to put together an 8K cartridge that switches between two 4K banks (a la
2600 Asteroids and other masked ROM carts of that era)... Obviously I
know how the software does this, but I need some help making the
hardware. Please reply in email if you have any ideas, or are
interested in this project.

Thanks!

The last time I posted, I got a very favourable response, and there are now
a healthy selection of computers and components on my web page, that people
are looking to sell. If you are looking for an Apple 8 bit, Atari 8 or 16
bit, Commodore, or Amiga computer, then I suggest you check out the
following URL:

http://www.pacificone.com/trader

And of course if you are looking to sell any of those types of computers,
stop on by and fill out the form, it will be appended to the page within
the next day or two.

This is documented in INCREDIBLE detail several places on the net.

There are a handful of different bank switch methods used in 2600
games but they all work the same way; a read to a particular address
will cause one bank of the rom to be disabled and the other bank
enabled (for an 8K ROM, this is the very highest address bit changing
from 0->1). A very popular bank-switch location is FFFE/FFFF. A read
(or write) to FFFE selects the low bank and FFFF selects the high
bank. Simple as that. If you want to se how it is done, why don't
you just break open an Asteroids cartrigde; they are cheap enough!

Well, there isn't any write line going to the cartridge so the bank
switch must be getting triggered by a read to a certain address. You
will need to figure out what that address is, build a circuit to
decode that address, and use its output to handle the extra address
line.

isc,misc.forsale.computers.other,comp.sys.atari.advocacy,comp.sys.atari.st

     I have forsale the following system, approximately four years old.

Falcon Information:

System Contains:
     Falcon 030 motherboard with:
     * 4 megs ram
     * 68881 Mathco processor

     365 meg SCSI HD(2nd 3.5" bay)(4 partitions full of software)
     1x CD-ROM(1 5 1/4 bay)
     1.44 meg floppy(1st 3.5" bay)
     2 open 5 1/4 inch bays, 1 open 3.5" bay

This machine was recased by me, and the ports that I chose to bring to the rear of the machine are:

Audio in/out(left/right RCA jacks) NOTE: THE only problem with this machine, and the only thing that has _ever_ given me trouble on this computer has been the left audio input channel. I think it is the plug on the motherboard, but I am not quite sure.

Another note about audio:

There are three front panel switches, one turns on/off internal speaker, one switches audio input to the mothberboard between the internal CD-ROM audio out and the raear panel audio in. The third switch deals with switching the Falcon motherboards audio out between the audio out RCA jacks and the headphone jack, also located on the front panel.

The reset switch on the front panel functions.

The keyboard is a TT030 keyboard, missing the F8 keycap. This keyboard has a keyboard reset switch installed internally, accesseble via the plug bay at the rare of the computer.

Video out with Screenblaster installed internally is brought to the back panel.

Parallel/Serial brought to back panel.

MIDI in/out brought to back panel.

Composite Video brought to back panel.

This machine works, and I shall include with it:

*VGA 15 pin video adapter
*ST monitor plug adapter
*All necessary cables
*No monitor
*All manuals/original disks that I can find.

Bidding starts at $650. I shall sell the system for the best offer.

I have a Mega STe mother-board, i have questions please
answer me, because i want take advantage of the board..

what type of HDD's for Mega STe can i use? internal,
external,removable-media..
what type.? : need special connector? (prices)
Exist IDE adapter for Mega STe?

Can I connect a ET4000 with Crazy Dot to Mega STe??
how cost Crazy Dot ?
how cost ET4000 ?

what monitor i need if i can connect Crazy Dot & ET4000 to Mega STe??
what monitor? with some special connector?
Is Nova Graphics card a good choice?

exist differents types of cases for Mega STe..??
what type desktop? tower? (prices) ..what case i need if a want connect
ET4000 & Crazy Dot to Mega STe Motherboard??

what languages & kits exists for Mega STe to programming??(prices)
(like C++,C,java,perl,databases..)

I know that megaste motherboard came with TOS 2.05..then the question
is ...which are the differences between it and TOS 2.6.???

I hear that megaste have keyboard input..... what type of keyboard
....an "atari-keyboard" or "PC-keyboard"?? (what is the cost of each)

Can I up the speed of Mste ??? (16Mhz to 32Mhz)

Thanks very much to anyone that answer my questions. Good Bye Friend./

PS: Sorry for my english./

For C I would recommend Lattice C 5.6, which is very complete and documented in
english. Price is about $200, but it may vary.

Regards.

Hello,

I'm in the market for a working 1040ST, with hi-res grayscale monitor. I have several Atari floppy disks that I would like to transfer to my Pentium PC system; unfortunately, the disks were formatted on the 1040.

I need to get these disks into PC format, but I'd also like to do some experimenting with a 1040 (or Mega) and want to buy an ST or Mega.

If you have a 1040 to sell, or you'd be willing to let me have the use of it for fifteen minutes to copy the floppies, and you live in the immediate Tucson area, I'd like to hear from you. Thanks!

Regards,
Thom Gandet

I got a bare-bones 520ST about a year ago, with one boot floppy, no manuals and no HD. Due to the scarcity of help and software, I'm almost on the verge of selling the system. Can anybody provide me with:

* The most modern OS that will work well on a 520ST. Remember, I don't have a hard drive!

* A decent terminal program so I can get the ST on the net (Zmodem
download would be needed).

* Manuals? Any old pro out there who no longer needs to refer to their
520 ST manuals? Even photocopies are welcome.

* Pin-outs and or manual for the color SC1224 Atari monitor.

* Music software for a MIDI keyboard (this is why I got an ST).

Thanks,
Jill

Well if it's bare bones, and software is scarce, it won't be easy to sell
it.

>
> * The most modern OS that will work well on a 520ST. Remember, I don't

Um, this ain't no PC with multiple-choice OS. You turn it on, it boots.

Vanterm, AnsiTerm, and many others..

A manual for a monitor? Why not simply plug it in? The other manuals that
come with the computer are notoriously simplistic. They tell you where to
plug things in. What kind of manual are you looking for?

> * Music software for a MIDI keyboard (this is why I got an ST).

There are several kinds, but I'm not up on the latest. Try contacting your
local Atari user group, or write to ours:

Atari 520ST computer, Atari SM124 monitor, and Atari SF354 disk drive.
No power supplies or other cables. All items look like they're in good
condition, but have not been tested.

For more info, please visit
http://komodo.ebay2.com/aw-cgi/eBayISAPI.dll?ViewItem&item=2508233

Hello!

I have a complete Atari 800 system, 810 Disk Drive, Cassette Recorder, etc.
A whole box of cartridges and games. 2 boxes of stuff ready to go.

Everything works.

I prefer not to throw this in a landfill, and I saw these newsgroups.

I live in the greater Boston area, so if you're local come and get it!!

If not, I have no problem shipping this stuff for the COD fee ONLY. I'm
guessing probably around $30 per box for shipping, etc.

Please let me know soon...

Hola indeed.

Non hablo espanol. (Probably wrong, but it's as near as I can get)

I have an e-mail to compose.

Does anyone still have the universal translator mentioned here some time
ago? Could they please oblige me with the Spanish for;

1) abuse

2) spam

3) Chain letters are illegal in most European countries.

4) Fraud is illegal in all Euopean countries.

5) You are a nitwit.

Gracias,

5) usted es un nitwit.

I used the Altavista translator at
http://babelfish.altavista.digital.com for this...

Shame that 'nitwit' wasn't translated as this would be a useful word
for holidays... ;) 'Spam' must just be a universal nuisance (typo?).

Ben

I have an internal hard drive for Atari ST. It has never been used, and
I have no use for it.
Don't ask me how to install it. The size is 7 x 10 x 1.5 cm and it holds

40 Mb. Please e-mail me an
offer if you are interested in buying it.

I need to transfer my PC midi files to a friend's of mine Atari. Do you
know how can I do it as long as the Atari does not read DOS formatted
floppy-disks?
Reply here or mail me at hpascu@netsoft.ro

You could use a nul modem or if your friend has a modem, call his place
with a modem call.

The Atari ST reads both single-sided and double-sided

single-density and double-density diskettes using the
same format as IBM clone computers.

The Atari Falcon additionally reads single-sided and
double-sided HIGH density diskettes using the same
format as IBM clone computers.

Cheers!

AFAIK single density means FM format (low level format mode, usually MFM
is used). The ATARI's floppy controller can read and write FM disks, but
you need a little hardware modification. Besides, I never saw those.

> The Atari Falcon additionally reads single-sided and

There should be no single sided high density disks...

A quick check of Windows95 shows support only for
720K and 1.44M diskettes -- i.e., double-sided only.

Another reason to consider the Atari.

The pin DDEN (Double Density ENable), pin 26, is grounded. Make it high
and it wil write in FM format.

> : There should be no single sided high density disks...
>

No that's wrong. There is no Atari machine that reads single-density
disks.

Cheers Peter

Whoops! Well, this is certainly my month
to state obvious inaccuracies with authority.

I'll go to my room now....

-- George Crissman
-- strads@tmisnet.com

... you know ... there's a project that doubles the
clock speed to the floppies so they can use the
high density format ... maybe there's another one
that halves the clock speed so that single density ...
nah ... maybe not.

Never mind.

I think it depends on the atari computer your using. I use a mega/ste and I transfer files between my dos machine and the atari all the time. I usally format the disk in the IBM. I find the only times it don't work is when I make directories on the disk or delete some files from it. If you could fromat the disk in DOS format copy the file to it and do nothing elase it might work. Also, I think there are programs out there which allow atari computers to read dos formated disks. Don't hold me on that though. If you've got internet access search some of the shareware search sites.

Scott.

I have some 1 meg SIMM's ideal for upgrading your STE or Extra RAM
Deluxe upgrade board.

Upgrading from 512k or 1024k/1 meg to 2 meg .... 12.50 UKp (Sterling)
Upgrading from 2 meg to 4 meg ..... 12.50 UKp (Sterling)
Upgrading from 512k or 1024K/1 meg to 4 meg .... 22.50 UKp (Sterling)

Along with the memory, you will get fitting instructions and a disk of
utilities.

Sorry, UK and Europe ONLY.

Cheers! for now
Steve

: Just aquired an Apple IIGS . Need basic software such as appleworks etc.

AppleWorks GS is still copyrighted, I believe not by Claris (or Apple), but by Scantron Quality Computers. Though they do not publish them no more, but you should be able to pick a used copy from the InterNet relatively cheap. I got mine for equalivant US$6.50 (box and manual) last year ... I had inherited disks with no manuals originally.

You can download Apple's HyperCard IIGS and System 6.01 from the Apple's FTP sites (apple_software_upgrades) for free.

Or visit the two main FTP sites for public domain programs (i.e. shareware, freeware stuff): apple2.caltech.edu & ground.isca.uiowa.edu

You can also visit the Treasure Chest Project which lists reclassified software which were once commercial to public domain at this URL : http://www.tals.dis.qut.edu.au/staff/willie/TreasureChest

Others, well, you should be picking up other posts that will give other directions where to look for, e.g. Nathan Mate's csa2 Apple II FAQs.

Im looking for atari 7800 cartridges. Also 2600 cartidges since they
will run in the 7800 system. If you have any for sale let me know the
title and whether it is a 2600 or 7800 cartridge so I can check my
list.

I have to transfer about 100 MB from my old ATARI TT to my
Windows 95 computer. The diskette drive from the ATARI TT does not work.

I found some old Serial trasnfer program. But this works only up to 19200
Baud.
This program fails after some kb at higher speeds.

It there any other program to make the transfer?
Between Windows 95 computer, I use paralell cabel conection.

You can use Ghostlink on the higher-speed serial ports of the TT and
transfer at about 115200 (possibly 230400 if the Win95 box can handle it).
All you need is that same null modem cable you're trying to use with the
term program.

Another alternative would be a more recent comms program like Connect, which
will permit high speeds on the added serial ports.

   Dear Atarians:

   Thanks to eveyone who helped me set up my CAB/STik system. It now works! BTW, if anyone wants help, especially in the BAY AREA, I will try my best to return the favor granted me by the Atari Community!

   However, I still have some questions:

1.How come I can't download with CAB. Is there something I don't know?

2. Is my DEFAULT.CFG correct, fully optimized? My system (TT030,2/4meg/105HD,Magic4,NVDI3 - CAB 030 1.5/STik 1.22/OVL 1.8) still tends to crash occasionally.

   HERE IT IS!:

Is there an program I can find to run my old Atari 8-bit software on my
pc-compatible?

Do I have to use my atari floppy drive patched into my paralell port or
something? -or-
Can I transfer them to my pc-harddrive using a pc-floppy?

Will the sound from the Atari 8-bit games run through a pc-soundcard?

-Matt

Yes, there are quite a few emulators you can run on the PC,
PC Xformer available from http://www.emulators.com/
or there's XLit 0.16, but I'm not sure where it is (I have a copy if
you want me to email it)
BUT, in my experience using emulators you are far better off with the
real ATARI, cause the EMU's just don't seem to handle some software
(eg. SpartaDOS, SuperDOS, and any other DOS or program requiring high
speed disk IO). Also, running XLit, the sound DOES work through a
SBlaster, but you need a faster PC than mine (486 DX2-80) to be able
to play sounds at the correct speed (music is veerryyyyyy slow).
As for transferring your ATARI software, check out my Home Page
(hopefully listed at the bottom). It has info for the SIO2PC cable-
which emulates ATARI disk drives from your PC, and a program which is
called MYUTIL (not that its actually mine, thats just what it's
called), this will read and write an ATARI double density disk on your
PC's 5.25 disk drive.
Drop me an email if you want any more help...

Steve.

Gee, I hope you either chage your mail password soon or you posted a
phony one. Cab cannot download. You need an ftp program. There is one
out there but I could not make it work.

Did you hear anyone say "Goodbye"?
==========
by Donald A. Thomas, Jr. (10/4/96)

It's odd to imagine an institution, which was as big and as powerful as Atari
once was, to have been shut down in recent days. The real amazement for me is
that it was all accomplished without a measurable flinch from within or outside
the gaming industry. I can understand that gamers wanted to push Pong out the
door early in the timeline. I can appreciate that the classics such as Missile
Command and Asteroids do not push 32-bit and 64-bit systems to any technological
limits. I know all these things intellectually, but the heart cannot face the
truth that the world and the corporate machine known as Atari could not find an
amicable way to coexist.

On Tuesday, July 30, 1996, Atari Corporation took each and every share of it's
company (ATC), wrapped them all in a tight bundle and presented them to JTS
Corporation; a maker and distributor of hard disk drives. On Wednesday, the
shares were traded under the symbol of JTS. Within a few weeks, the remaining
staff of Atari that were not dismissed or did not resign, moved to JTS'
headquarters in San Jose, California. The three people were assigned to
different areas of the building and all that really remains of the Atari
namesake is a Santa Clara warehouse full of unsold Jaguar and Lynx products.

It was only as long ago as mid '95 that Atari executives and staff believed
things were finally taking a better turn. Wal*Mart had agreed to place Jaguar
game systems in 400 of their Superstores across the country. Largely based on
this promise of new hope and the opportunities that open when such deals are
made, Atari invested heavily in the product and mechanisms required to serve the

Wal*Mart chain. But the philosophical beliefs of the Atari decision makers that great products never need advertising or promotions, put the Wal*Mart deal straight into a tailspin. With money tied up in the product on shelves as well as the costs to distribute them to get there, not much was left to saturate any marketplace with advertising. While parents rushed into stores to get their kids Saturns or PlayStations, the few that picked up the Jaguar were chastised by disappointed children on Christmas day.

In an effort to salvage the pending Wal*Mart situation, desperate attempts to run infomercials across the country were activated. The programs were professionally produced by experts in the infomercial industry and designed to permit Atari to run slightly different offers in different markets. In spite of the relatively low cost of running infomercials, the cost to produce them and support them is very high. The results were disappointing. Of the few thousand people who actually placed orders, many of them returned their purchases after the Holidays. The kids wanted what they saw on TV during the day! They wanted what their friends had! They wanted what the magazines were raving about!

In early 1996, Wal*Mart began returning all remaining inventory of Jaguar products. After reversing an "advertising allowance" Atari was obligated to accept, the net benefit Atari realized was an overflowing warehouse of inventory in semi-crushed boxes and with firmly affixed price and security tags. Unable to find a retailer willing to help distribute the numbers required to stay afloat, Atari virtually discontinued operations and traded any remaining cash to JTS in exchange for a graceful way to exit the industry's back door.

Now that JTS has "absorbed" Atari, it really doesn't know what to do with the bulk of machines Atari hoped to sell. It's difficult to liquidate them. Even at liquidation prices, consumers expect a minimal level of support which JTS has no means to offer. The hundreds of calls they receive from consumers that

track
them down each week are answered to the best ability of one person.
Inquiries
with regard to licensing Atari classic favorites for other applications
such as
handheld games are handled by Mr. John Skruch who was with Atari for
over 13
years.

In spite of Nintendo's claim that their newest game system is the first
64-bit
game system on the market, Atari Corporation actually introduced the
first
64-bit system just before Christmas in 1993. Since Atari couldn't afford
to
launch the system nationwide, the system was introduced in the New York
and San
Francisco markets first. Beating the 32-bit systems to the punch
(Saturn/PlayStation), Atari enjoyed moderate success with the Jaguar
system and
managed to lure shallow promises from third-party companies to support
the
system. Unfortunately, programmers grossly underestimated the time
required to
develop 64-bit games. The jump from 8-bit and 16-bit was wider than
anticipated.
In addition, Atari was already spread thin monetarily, but were required
to
finance almost every title that was in development.

After the initial launch, it took Atari almost a year before an
assortment of
games began to hit store shelves. Even then, having missed the '94
Holiday
Season, many of the planned titles were de-accelerated to minimize
problems
caused by rushing things too fast. Consumers were not happy and
retailers were
equally dismayed. The few ads that Atari was able to place in magazines
were
often stating incorrect release dates because that information changed
almost
every day although magazines deadline their issues up to 120 days in
advance.

It was in 1983 that Warner Communications handed Jack Tramiel the reins
of
Atari. By this time, Atari was often categorized as a household name,
but few
households wanted to spend much money on new software and the systems
were
lasting forever. No one needed to buy new ones. That, combined with
Warner's

obscene spending, amounted to a *daily loss* of over $2 million. Atari was physically spread all over the Silicon Valley with personnel and equipment in literally 80 separate buildings; not considering international offices and manufacturing facilities. Mr. Tramiel took only the home consumer branch of Atari and forced Warner to deal with the arcade division separately. Within a few years, Jack took the company public, introduced an innovative new line of affordable 16-bit computers and released the 7800 video game system.

To accomplish these miracles for Atari, Jack implemented his "business is war" policies. While people who publicly quoted his statement often felt that policy meant being extremely aggressive in the marketplace, the meaning actually had closer ties to Tramiel's experience as a concentration camp survivor. Of the 80 buildings in Sunnyvale, Santa Clara and Milpitas, almost every one of them were amputated from Atari's body of liabilities. The people, the work, the heritage, the history were fired or liquidated. Those who survived were unsympathetically required to fill in the gaps and while most tried, few actually found a way to be successfully do what a dozen people before them did. Atop the mountain, Jack pressed with an iron thumb. All Fed/Ex mailings were required to be pre-approved by one of a handful of people. "Unsigned" purchase orders went unpaid regardless of the urgencies that inspired their creation. Employees found themselves spending valuable time trying to find ways around the system to accomplish their jobs. Many of them lost their jobs for bending the rules or never finding a way to make things work. As horrible as it all sounds, it actually was the only way to protect Atari as a company and give it a chance to survive as it did and did very well.

Jack's introduction of the 16-bit computer was initially hearty in the United States but it went extremely well in Europe. Europeans were not accustomed to "affordable" technology and although the Atari computers were not IBM

compatible, it didn't matter because people could afford them. Jacks' private
laugh was that the computers were sold at prices much higher in Europe than
Americans were willing to pay. As a result, most of the machines made were being
shipped to European destinations to capture the higher margin. This enraged the
people in the United States that had been Atari loyalists. While waiting months
for stores to take delivery domestically, international magazines were touting
ample supplies. Those in the know within the U.S. became dismayed. The remainder
never knew Atari was slowly abandoning the value of Atari's name recognition as
it became easier and easier to forget some assuming Atari had long filed for
bankruptcy.

On a technical level, Atari 16-bit computers were designed beyond their time.
For less than $1,000, consumers could enjoy "multimedia" before the phrase was
ever really widely used. The icon-based working environment proceeded Windows
popularity although the essential attributes of the two environments were very
similar. MIDI was built-in and became an instant hit in the high-end music
industry. Tasks were activated and manipulated with a mouse and the system
accepted industry standard peripherals such as printers, modems and diskettes.

With all the genius that went into the technology of the machines, very little
of equivalent genius went into the promoting and marketing the machines. Mr.
Tramiel was the founder of Commodore Business Machines. When he introduced the
PET computer in 1977, Jack discovered he didn't have to call a single
publication. Instead they all flocked to his door demanding an opportunity to
see the product. News magazines. Science Journals. Business newsletters.
Newspaper reporters. They were all there with microphone, camera and pen in
hand. And they kept coming back. Adding a switch, announcing a new 4K
application or signing a new retailer were all big stories the press wanted to
handle.

Today, a new video game announcement may generate a request from any of

the
dozens of gaming magazines for a press release, but a lot of costly work has to
be done to assure fair or better coverage. Editorial people are literally
swamped with technical news. Samples are mailed regularly to their attention.
Faxes fly in through the phone lines and e-mail jams up their hard drives. It
takes a lot to grab their attention.

While Atari retained hopes to be successful with the Jaguar, Atari's marketing
people were fighting established standards in the industry with severe
handicaps. Since cartridges (the Jaguar was/is primarily a cartridge-based
system) were so expensive, editorial people were required to return them before
new ones would be sent. Editorial people like to assign review projects. So
finding cartridges they sent out was not always easy to do. Additionally,
reviewers often love their work because they get to keep what they write about.
Regardless, the few magazines willing to cover Atari products were more often
turned away because of a lack of programmable cartridges or any number of other
indecisive barriers. In-store signs and posters were sometimes created, but many
retail chains charge premiums to manufacturers that want to display them. Some
direct mail campaigns were implemented, but Atari often could not afford to keep
those things being advertised on schedule. Therefore, the advertisements were
published and distributed, but the product was not available.

Clearly, Jack's experience with the world beating a path to the door of a
company making a better mousetrap no longer applied. The world had revolved a
few times beneath him and he never noticed. The tactics used to successfully
sell Commodore computers were simply antiquated notions from the past.
Meanwhile, Sony launches the PlayStation with over $500 million in marketing
funds. Today, the PlayStation is considered the most successful next-generation
gaming machine throughout the world. Sony bought the market. Tramiel's Atari
never learned how to do that. Actually, they never could afford it anyway.

After the 1990's got underway, Europe as well as the rest of the world, discovered that IBM-compatible computers were becoming more powerful and more affordable. The world always did want computers at home just like in the office and companies like Dell and Gateway exemplified the industry's trend toward home-based office computers. As a result, companies like Commodore, Atari and Next couldn't compete any longer. While the dedicated user base of each of them felt abandoned by these companies having to leave the computer market, the inevitable prevailed. Commodore jumped ship, Next changed business goals completely and Atari invested what they had left in the Jaguar game system. Even today, Apple is kicking and screaming. As good as Apple was at creating a huge niche for themselves, they focused more heavily on education. When kids grow up and get jobs, they want business machines. IBM was always the business standard.

When one examines the history of Atari, an appreciation can grow for how many businesses and people were a part of the game over the years. Chuck E. Cheese Pizza was started by Atari's founder, Mr. Nolan Bushnell. Apple Computer was born in a garage by ex-Atari employees. Activision was founded by Ace Atari programmers. The list goes on and on.

But for some pathetic reason Atari's final days came and went with no tribute, no fanfare and no dignified farewells. Why? Where did all the talent go? Where are all the archives? Where are the vaults? Where are the unpublished games and where are the originals of those that were? Why has no company stepped forward to adopt the remaining attributes Atari has to offer? Where are the creditors? What has happened to all the properties and sites? Where are the databases, warranty cards, promotional items, notes on meetings, unanswered mail? Who owns P.O. Box 61657? Who goes to work in Atari's old offices? Where do consumers have their systems fixed? Who is publishing new games? Who still sells Atari products? Why are there still a lot of people talking about Atari on-line?

I'm an ex-Atari employee and proud to have been. I'm still an Atari devotee and
proud to be. To me, these are questions which all deserve an answer, but who
will ask them?

The best people to ask these questions are those who have exposure to the
public. If you believe Atari left us without saying goodbye, contact Dateline at
dateline@nbc.com. If you REALLY believe, then send this article to 10 of your
friends in e-mail. AND if YOU REALLY, REALLY believe, mail a few to newspapers
or other news programs. A letter in your own words would be great!

I'd spend money for a thorough retrospect on Atari. Wouldn't you?

Wouldn't it at least be nice to say "Goodbye"?

Wow... that was cool.

It really is too bad that Atari did just 'die' quietly. There are so many
loyal Atari ppl out here that we deserve a miniute to say goodbye...

{1 miniute of silence}

Bye.

Will

Don,

Very well written article. I first got aboard the Atari wagon in 1976 or so with the VCS .. then sold it and in 1980 got the Atari 800, my first computer, which I used to get through some college 'basic' programming classes, even though we were using IBM's then .. I could write my programs in OSS Basic XL, then convert it "on the fly" in the classroom ... I was always the 1st one done with my programs .. got A's in both classes too. Over the years, I've had many Atari computer systems, even had an ICD Multi I/O system with 1meg MIO and a 40meg HD, along with the 320k 130xe and the xf-551 dual system (which had a 3.5" 720k floppy).

Now, I'm using a PC, like most people. I still have my original 800 set up at home, as well as a 130xe. Somehow, I can't bring myself to put them away. I suppose I will, one day.

You're right. It WOULD have been nice to say, "Goodbye"!

Bill

Now that brought a tear to my eyes, well written!!!
My God.... If only they had changed a few tactics, ATARI would still
be around.

Steve.

I just want to clear up any misunderstandings - I did not write this. It
was written by Donald Thomas (see quote above). I am merely reprinting

it (permission is given at the end of the article) because I thought it
was so good and that others would appreciate it. Thanks for the e-mail,
but the guy you want to contact is someone else - his e-mail address is
listed at the end of the article.

: So if July 30,1996 is when Atari officialy died when was it 'born'??

Some time in 1972, I believe.

Oh, incidentally, Don's article (Did Anyone Say Goodbye?) appeared a
couple of months ago in Next Generation, a video games oriented magazine.
The month before or after they also ran an article on the history of
Atari, whether the idea for Pong was stolen from Magnavox, etc. This
month's issue has a section on myths/truths about classic video games.
Well worth checking out...

What an excellent posting! Brought a tear to my eye. I never did know what happened to Atari. It makes you kinda sad. My first computer was an Atari, a 600Xl. I still have it, though I upgraded a long time ago to a 800XL that still beats me at chess weekly.

All the details about the 8-bit line are in
http://pmwww.cs.vu.nl/home/ipoorten/Atari.8bit.Homepage/refman/refman.html

The specific info about paddles is located in chapter18.html - I hope that
will be what you need.

M.Bieleveld@pi.net.**********I have made my own set of paddles since I figured it would be easier
than trying to find a used old set. I used a 500k Ohm linear taper (not
an audio taper) potentiometer and it worked fine. I read in a FAQ
somewhere that Atari's used a 1 Megohm pot - this gave me half a
rotation of the pot that was unusable. The computer reads the value of
the pot by charging a capacitor for a set clock time. The value of the
pot sets the amount of capacitor charge - a very crude A/D convertor!
However, it does allow the programmer to use the paddle alues as an
accurate timer.

Excellent article. I must admit, this was the first news I've heard of Atari's demise, and I am truly sad to see it go. Other than the 2600, which almost everyone had, my first exposure to Atari computing was only 5 years, when a friend talked me out of buying a COmmodore 128 in favor of a 1040 Ste. He's long since switched to a Pc, but I still hang on, even now that I've upgraded to a Falcon.

To some great years, and a lot of fun with them, Goodbye Atari :(

I suppose you could go play in comp.sys.ibm or comp.sys.mac for a while couldn't you?

And before you tell me to go get a *real* machine I happen to own a
P-120mHz and I do
use Win95. I was also a programmer on both the AtariST and the Atari-8bit
and let me
tell you what a *NIGHTMARE* it is programming for Win95. GEM was baby-talk
compared to
the stupid API calls Win95 has and all the patches you need and the stupid
format of the
calls (half the system calls are derived from Pascal, the original language
Windows was
programmed in).

I thought the post was quite interesting since I did not know that Atari
Corp had
'officially' left us. But the important thing is that there are still
people who
enjoy using the machines and if it's good enough for them then why should
they go out
and spend 1000's of $$$ on an IBM or Mac?

Like I said before: if you've gotten tired of Atari's then please take
yourself off to
another one of the 10,000+ newsgroups!

Will Fisher

Hello, where have you been? Atari Corp has officially left us, abandoned
the platform, etc. etc.

As for the nightmare of windoze programming, perhaps you need a few more
courses :-). The nightmares don't seem to have stemmed the tide of great
Win 95 software, like gemulator 96 for instance.

As for everything else you said, I pretty much agree. Being a user of
both platforms, I use Win 95 for the great apps available, superior
sound, speed and graphics.

But I don't love it the way I loved my falcon and my megaste. Those were
great home computers.

OTOH, I also agree with Shellac that the management and marketing of
Atari has been a source of frustration for users for years.

> that TOS was some big model of perfection...Far from it.

No... but it's nicer than Windoze any day of the week. What you don't seem to understand is that all the extra functionality that you see in Windows is written into each an every application. For example, OLE. This is not some complex OS feature, but a standard communications interface implemented in many major programs.

Also, Windows is a *PIG* to program, mostly due to the fact that, unlike TOS (which seems to be unique in this respect), there's no systematic function naming (e.g. in GEMDOS, all file functions start with an "F", and all memory functions with an "M"). Under Windows, it's pot luck whether you even find the damn function you were looking for.

You're right, the Jaguar was hastily produced, and some of the games were rather... well, SNES-like... However, it *was* a 64-bit machine. The Jaguar has one MC68000 (16/32-bit), four 64-bit RISC processors, three of which are more or less completely dedicated to graphics, but could probably be used for processing as well, and one 32-bit RISC DSP chip to handle the sound subsystem.

The 68000, contrary to popular belief (proliferated by the rather anti-Atari console press) is only actually used to process I/O, such as the joypad, and for "housekeeping tasks" - I assume this includes little things such as clocks.

No - this is unfair. Bill Gates could probably have managed Atari
better, but Atari was failing anyway; the major problem that they
had was that the press were largely against them, resulting in the
entirely juvenile behaviour of a large portion of their potential
market (the "Oh - it's an Atari - well, it must be cr*p then"
syndrome). Monkies, however, could not have managed it better. The
Tramiels have actually done quite a good job; although you probably
don't realise it, the Atari 2600 games system was the most popular
console ever.

You both got it wrong.

The Jag has a MC68000 and two identical 32-bit RISC processors (one of which was intended to handle sound processing). It also has a couple coprocessors to accelerate things like blitting, sprites, etc. The 64-bit element in the whole affair was the memory bus connecting the various processing elements and the 2MB DRAM memory together.

Does it really matter that none of the processors in the machine cannot handle 64-bit instructions? No. The only reason the N64 to has a 64-bit CPU is that SGI designed the thing, and they're partial to the 64-bit MIPS architecture. Not surprising, given that SGI owns MIPS.

There were clear benefits for game consoles to move from 8 to 16 to 32 bit CPUs. These jumps allowed larger address spaces and quicker computation (because 16 and 32 bit calculations are very useful). But 32-bit address spaces are overkill for games in the immediate future, and 32-bit numbers have a large enough range that you don't really need more except in very rare cases.

And, hey, what the Hell, this happens to be an Atari newsgroup, so
how this happens to be wasting bandwidth I'm really not sure.
All the comments Shellac made seemed to reflect a total disinterest
in Atari computers now - why are you here? Isn't this a newsgroup
for "hopeless romantics"?

Funny you should mention Bill Gates and then talk about "take the money and
run" management.

Do you know how much it costs to report a bug (yes, I said "report") to
MicroSoft? Minimum, $35 - YOU have to pay THEM to tell them they have a bug
in their OS.

"Now go away, or I shall taunt you a second time."

Some of us don't think that anything coming from MicroSoft employees
qualifies, either officially or as a moonlighter, as "great." <G> Unless,
of course, you refer to the size of the package.

Followups set - probably to the wrong place, but I'm not sure you MEANT thsi
as flamebait.

Get a grip guys... I was once an Atari User and all I had to look
forward to was a lack of software, non-existant tech support, buggy
operating systems (TOS Ring a bell?) and always wanting to do what the
Mac and IBM (Not to mention AMIGA) could do..never really achieving
it. The real Evil was the Tramiels who couldn't get off their fat
white asses and market the machines they produced properly, or for
that matter at least care about their customers... I think when I had
to send away money for a floppy cable from Britain is when I woke up
and grabbed a clue... A big blue clue... So Windoze (and still isn't)
as bug free as they said it is. Well, you're dead wrong if you think
that TOS was some big model of perfection...Far from it.

In my opinion, the Jaguar was a hastily produced, crappy fragile
machine that was once again marketed half-assed with games that looked
like 2nd generation Genesis and SNES titles... Pretty sad for a
so-called 64-bit machine.. And here's a correction... The Jaguar was
one 32-bit and 2 16-bit Symettric multi-processors. There is nothing
64-bit about the jaguar at all. Except if you add the processors's
together, which is one big cop-out.

The only hope for Atari is that they don't lose even more money, or
for humanity's sake, the Tramiel's going into business again... I'd
certainly hate to see market share for another company jump from
thriving to downright pathetic. Monkey's could have managed Atari
better. BILL GATES could have managed Atari better...

So in the meantime let's GET OVER IT. And use the machines of today
and quit wasting time and bandwidth and being hopeless romantic's

towards people who didn't really give a shit about you or me, or
anyone..except how to make a buck a run like a petty mugger off the
street...

Reply's EXTREMELY welcome...

Shellac...

I meant 'official' in the business sense. Not in the customer support
areas, etc.
I did not know that Atari, Corp. had officially ceased to be.

> Hello, where have you been? Atari Corp has officially left us, abandoned
> the platform, etc. etc.

My last Atari STe died about a year ago.

> As for the nightmare of windoze programming, perhaps you need a few more

Tell me about it! =) I never said I was a genius Win95 programmer, far from
it
actually, but I am learning. GEM only took me appx a month or two to master
easily.
Win95 it taking considerably longer than that to even feel confortable

with. (sigh).

I agree 100%! The Falcon030 was a wicked-awesome machine!

> OTOH, I also agree with Shellac that the management and marketing of
> Atari has been a source of frustration for users for years.

I did not disagree, i just felt his way of saying so was incorrect! =)

I'm not impressed by the Tramiels' handling of Atari. And the
success of the 2600 was there before the Tramiels' came along.
The persistence of the 2600 is more due to its uniqueness, it
being one of the very first game consoles, and not to the
Tramiels per se.
Also the success of the Atari 2600 in the begininng, when it
was just plain ol' Atari VCS was the very reason why the Atari
Home Computers suffered from the image of a "games machine".
It didn't help when Atari didn't know how to market their
new technology, either, or treat their employees well. They
lost good programmers that way.

Looking for a little help...

I just was able to rescue my old Atair 2600 out of my mothers attic
(huzzah) put she had tossed the joysticks and paddles long ago.

Any hints/leads on where I can pick up some old 2600 controllers? I'm in
the Boston area and I've got a Donkey Kong jones sumthin' fierce!!

(Please respond by email...)

You are talking bullshit. The Jaguar _does_ handle 64-bit
instructions. Would you accept Marc Rosocha as a reference?

: P-120mHz and I do
: use Win95. I was also a programmer on both the AtariST and the Atari-8bit
: and let me
: tell you what a *NIGHTMARE* it is programming for Win95. GEM was baby-talk
: compared to
: the stupid API calls Win95 has and all the patches you need and the stupid
: format of the
: calls (half the system calls are derived from Pascal, the original language
: Windows was

: programmed in).

Johosephat!
Windows was writen in a LEARNING language?
Pascal was just created to start out in.It doesn't even have a command
equivilant to BASIC's POKE!!!
And people wonder why I hate it.
Like that little tiny window that you have to pick a file from when a
programme asks you for a file.
(this is built into Windows so EVERY programme will show this)

: I thought the post was quite interesting since I did not know that Atari
: Corp had
: 'officially' left us. But the important thing is that there are still
: people who
: enjoy using the machines and if it's good enough for them then why should
: they go out
: and spend 1000's of $$$ on an IBM or Mac?

For DOOM,what else!

Well,if you're going to buy everything new!
I always buy used from thrift shoppes and flea markets.

: No... but it's nicer than Windoze any day of the week. What you don't
: seem to understand is that all the extra functionality that you see in
: Windows is written into each an every application. For example, OLE.
: This is not some complex OS feature, but a standard communications
: interface implemented in many major programs.

Are you sure that it's not built into DLL files rather than the programme
files themselves?

I thought that OLE was a file format,not inter-process comunication.

 : Also, Windows is a *PIG* to program, mostly due to the
fact
that, : unlike TOS (which seems to be unique in this respect), there's no
: systematic function naming (e.g. in GEMDOS, all file functions start
: with an "F", and all memory functions with an "M"). Under Windows,
: it's pot luck whether you even find the damn function you were looking
: for.

uh,that's really a matter of what programming language you use.The
functions aren't really named anything.

As for "file functions",Windows doesn't have any.That's what DOS is for.

Believe it or not, Windows was originally written in Pascal. And up until
Windows 3.11 for Workgroups PASCAL was still in the source code. In Win95
tho there is no more PASCAL language. Just support for it's data structures
for older programs.

Will

Well,except for the part of Windows 3.11 that are still in 4(aka 95).
Like I said,it's like a Win32s deal.32-bit programme system calls just get
converted to 16-bit ones.

I think the point is if it has 64-bit registers (and data bus) it can move
64-bits at a time.I don't really see the point of 64-bit instructions.

>>
>>You're right, the Jaguar was hastily produced, and some of the games
>>were rather... well, SNES-like... However, it *was* a 64-bit machine.

The bitness of a machine depends on what definition you use.
I'd be inclined to call the Jaguar a 64 bit games system, but I wouldn't
call a normal computer based on the same chips anything but 32 bit.

>>The Jaguar has one MC68000 (16/32-bit), four 64-bit RISC processors,
>>three of which are more or less completely dedicated to graphics, but

>You both got it wrong.

And so did you, but you were rather close. ;-)

>The Jag has a MC68000 and two identical 32-bit RISC processors (one of

They're not identical, but very similar.
They both have some instructions that the other doesn't.
Also, the 'DSP' has more local memory and according to some people a
16 bit wide bus (I'm not quite sure about that).

>which was intended to handle sound processing). It also has a couple
>coprocessors to accelerate things like blitting, sprites, etc. The 64-bit
>element in the whole affair was the memory bus connecting the various
>processing elements and the 2MB DRAM memory together.

It's not only the bus that's 64 bit. Both the object processor (a sort of
complicated sprite engine) and the blitter can operate on 64 bit values.
Those two are in no way RISC processors, though, as some people have claimed.
One of the RISCs can read (and write IIRC) 64 bits of data with one
instruction as well.

>Does it really matter that none of the processors in the machine cannot
>handle 64-bit instructions? No. The only reason the N64 to has a 64-bit
>CPU is that SGI designed the thing, and they're partial to the 64-bit MIPS

Quite right. Most of the instructions for the Jaguar RISCs are actually
16 bit, though, even if they do operate on 32 bit values. Naturally, the
instruction size has little to do with anything.

>There were clear benefits for game consoles to move from 8 to 16 to 32 bit
>CPUs. These jumps allowed larger address spaces and quicker computation
>(because 16 and 32 bit calculations are very useful). But 32-bit address
>spaces are overkill for games in the immediate future, and 32-bit numbers
>have a large enough range that you don't really need more except in very
>rare cases.

Quite right again. There _are_ cases when you can profit from 64 bit wide
operations, though, but I'd be very surprised if they were very common
for game console code.

I have no idea who he is.

All the information I ever saw from people who actually programmed the
thing was that the CPU registers of the two RISC main processors were 32
bits wide. I recall one of them saying there was a 64-bit data move
instruction to utilize the full width of the memory bus. The blitter also
did 64-bit bus transactions, for obvious reasons.

You missed the real point of my post: that it just doesn't matter that the
processors in the Jaguar were not 64-bit. 32-bit is plenty for games.
The game ads screaming that 64 is twice as good as 32 are BS. There isn't
even a tremendous need for true 64-bit processors on the desktop, let
alone game machines.

absolutely.
and it doesn't have 64-bit instructions. well, the GPU can access the bus
64 bits wide if it wants, but this doesn't make a "64-bit instruction".
and if we're talking about the actual size of the instructions, those are
all 16 bits wide. all cpu-registers (gpu/dsp) are 32 bits wide.

You seem to be under the impression that game machines require less
less horsepower than general purpose computing? Game software is the

type of software that is always pushing the envelope.

OLE is a set of predefined interfaces for COM objects to support if they want to do OLE things.

OLE - used to mean Object Linking and Embedding, now means "OLE"
COM - Component Object Model

OLE is not a file format although some OLE interfaces support a specific file format scheme that stores multiple streams inside one file. You can write plenty of programs using COM without ever implementing an OLE interface.

I used to own an Atari 1040STfm. I still have it somewhere, I think the floppy drive is dead and it probably has about 10 pounds of dust in it. It served me very well for a couple of years and then it couldn't do the things I wanted so I had to buy an Intel clone to get my work done.

Hello,

I'm wondering if it is possible to read my midi files on a Atari ST machine. I use Windows NT/Win95 and Cakewalk for Windows to create my music. I can export to .mid format, and want to put these files onto a diskette and read it on my friend's Atari ST (Cubase).

I know that I have to use a 720 KB formatted DD diskette, but is that all?

Thanks in advance,

Michael.

There is strong support that the stunning Neon raytracer available only
at present on the Falcon will be arriving on the TT soon. Does anyone
have any further information for Neon TT? I understand that Compo
software are handling the translation so I'll see if anyone there knows.

Simon.

reply-to: gartmann@immunbio.mpg.de
newsgroups: comp.sys.atari,comp.sys.atari.st,comp.sys.atari.st.tech

Hello,

we have a colour monitor PTC1426 connected to an Atari TT. Now this monitor
is out of order - it remains just dark, although the little green LED is
on and you can see the tube for the screen gloom. We brought it to a dealer
but this one asked for at least US$ 350 to repair it. So we went to the next
dealer and this one told us he will do it for US$ 150. But after two weeks
he told us he couldn't do it because he couldn't get the necessary parts,
the manufacturer would no longer be in business...

Perhaps I should add that we have never been quite happy with this monitor:
From time to time he showed a very greenish picture, sometimes for one minute,
sometimes for ten minutes. And then the green flair just disappeared. And
this happened not very often and of course never at the dealer. In addition
it produced sometimes a very high tone (not very loud). This phenomenon didn't
seem to be correlated with the green problem, but who knows.

Thus, if anybody has an idea what to do, let me know.

Regards,
   Christoph Gartmann

I saw an Atari 800 computer with disk drive and tape deck unit all in the
box down at a local thrift store. Would anyone be interested in it for
say $60? If so, please let me know and I'll see if it's still
available. Shipping would be above and beyond the $60 and be paid by the
buyer. The unit would be tested to see if it's in working order before
the purchase becomes final. If you're interested, please let me know.

That's too much money, especially if it's an old 810 disk drive. I routinely find
Atari 800s for $10 and under at the local Savers and Goodwills. Disk drives are a
little harder to come by, but I'm pretty sure they price computer equipment by
weight
or something! :)

Check back in a couple of days. If you're lucky, it'll still be there (with all
the
pieces), and they'll have the whole thing marked down to $15 or less....

Scott

  A few weeks ago, I saw someone selling a Commodore-64 at a yard sale for $50;
that's JUST the C-64, no tape drive, disk drive, or software... I just didn't
have the heart to tell them... :-)

>
I've got this problem too. Soon after I installed TOS 2.06 in my STE I
reported it to my supplier, Compo, who replied that they had never heard
of it.
When I power up from cold, four times out of five I don't get my floppies -
although the icons for A: and B: appear, if I then double-click on one of
them I get a cheery TOS message "Drive A/B does not exist". Or if I choose
Install Devices from the Options menu, the floppy icons vanish from the
desktop.

On the other hand if I reboot (Ctrl-Alt-Delete) or Reset (button at rear
of computer) I _do_ always get my floppies.
To alleviate this problem, I have put a wee homemade program in my Auto
folder which checks for the existence of drive A:. If not found, it halts
with a warning message. I can then either press any key - to continue
regardless, because I am not expecting to use a floppy - or Ctrl-Alt-Delete,
which does the necessary.

The Germans have lots of patches for many other bugs in TOS 2.06, but I've not
seen any mention of this one. Anyway, their patches are not directly
applicable to British (Oz, US,...?) ROMs because the absolute addresses are
different. Was fuer ein Pech !
Has anyone out there converted any of these addresses, please...?
TTFN, Philip Taylor

I have this problem, too, but I know why. When I want to use my Sang
graphics card in my Mega STe (TOS 2.06), I have to turn on my ICD
hard drive AFTER I turn on my computer. If I don't wait for the floppy
to finish running its "test" (or whatever it is its doing when the little
green light turns on after power up) before I turn on the hard drive,
I get this problem.

In other words, are you turning your hard drive on before you are turning
on your computer? Or after?

computers,comp.sys.amiga.marketplace

Highest and only offer is 250...

My ATARI MEGA2 ST
How much can I sell it for?

Mail me an offer and we can see if we can work something out.

If I get a lot of offers, highest price takes it...

Of course, I am willing to trade for other stuff like toys I collect or
anime items, etc...
Stuff like Voltron, Macross, Gundam, Visionaries, any old japanese toys, etc..

If this is the wrong group for this, then please point me to the correct one.
I don't believe there is an atari.st.marketplace.

Here's the run down:

Hardware:

Atari Mega ST2 Comes with Internal Floppy drive and mouse and keyboard
Atari SC1224 Monitor (color, old model, made in Japan the "better" one before
    they started using the cheap parts one from Malaysia or something...)
Atari SF314 Floppy drive External
2 EPYX 500XJ Joysticks (very tough, uses a STEEL shaft)
All cables...

Software: (all are originals with docs and box unless otherwise noted)
      (Condition of box and docs are usually Excellent too)
      (a * means I have actually loaded this and made sure it
       works)

: I saw an Atari 800 computer with disk drive and tape deck unit all in the
: box down at a local thrift store. Would anyone be interested in it for
: say $60?

    That's way too much. You can get used 1040ST's with a built in 3
1/2 drive + mouse for $100 these days. Where do these stores get off?
It's like many of the people on the CoCo list are running them.

After. I'll try your suggestion, thanks. But in pratice it will be a nuisance to power up this way, because I run all devices from a distribution board i.e. they all get power at the same time.

Try leaving the HD on ALL the time! If nothing else you will save wear and tear on your HD mechanism ...

The only thing I ever turn off is the monitor(s) since they will burn out eventually. Once in a great while I get a power outage that always gets caught by the protection grid on our main box, but otherwise the system has not been down in six years. I have a cooled case so the CPU and TOS never get very hot (warm at best) and the drives (3) have probably 60000+ hours on them.

I have a M-4 that is Ser # 0000645 and probably was in the second or third runoff. Charles Cherry had it for a couple of years before I acquired it from him! He put the bug-free ATARI-made 1.04s in it along with new 70ns chips and upgraded controller (memory). Also the blitter and some other stuff.

Anyway, the need toi shut things down all the time is a myth!

Could someone please tell me how to transfer files from my PC to my Portfolio and vice-versa? I have the parallel interface, parallel file transfer cables and the File Transfer software. Every time I try to start an upload, the program just says "Waiting for connection..." and does nothing from there. The cable is hooked up to the parallel port of my PC and to the parallel interface. The internal Portfolio software is set on server and the PC's software transmits. What is going wrong?

Thanks,

Dave

summary: Atari ST H/Software for sale

Updated: 12/6/95

NOTE: A few things added, some sold, many prices dropped.
Enclosed is a list of the hardware and software that I am selling.
Please send me an e-mail if you are interested in something.
All prices are NEGOTIABLE.
I can not keep up with the newsgroups, so please use one of the below
ways of contacting me.
You can contact me at:
     BBS: (412)343-1422

Internet: asmodeus@telerama.lm.com
     WWW: http://www.lm.com/~asmodeus/
  there is a link on my home page for the current list of atari items

All above prices do NOT include shipping, and will be dealt with on
an idividual basis per order. All prices are in US Dollars, and payment
is to be in US Funds. Money Order payments will be shipped the day
after I receive payment, and personal checks payments will be shipped when
the check clears.

ATARI HARDWARE FOR SALE
All harware is Negotionable in price.
COMPUTERS:
1040 ST/F 1meg memory $130.00
1040 STE 4megs mem. $300.00

MUST SELL: I have an Atari 1040 STF for sale. It has Keyboard with CPU and
internal floppy drive, SC1224 color monitor, external floppy disk drive,
MIDI port, mouse and joystick, 1200 Baud Modem. Lots of manuals, software
and original boxes. Makes a great sequencer with the software sold often
through these groups. All for $300 post paid or BEST OFFER. Contact Rob at

I picked up a couple games for the Atari 400/800 at a thrift store the other day, still in the shrink wrap. The games were called "Princess and Frog" and "Fortune Hunter", both by Romox. "Princess and Frog" looks to be a clone of "Frogger", while "Fortune Hunter" appears to be suspiciously like "Venture". Does anyone know the rarity of these games and how much they're worth?

I have a system that I would like to sell, preferably as a whole, but I
will break it up if necessary. I have:

Atari 1040ST, 1 meg, mouse
Atari SC1224 color monitor with stand
Atari SX212 1200bps modem (blazing speed, eh?)
Atari SF354 single-sided external floppy drive
Gemini 8-pin dot matrix printer
All necessary cables and adapters

Everything is working 100% and in the original boxes. Make me an offer:
this thing is gathering dust in my closet, and I want to get rid of it.
Payment and shipping arrangements will be made when we make a deal.

If you reply to chris@flowerslabs.com, you'll get a slightly faster
response than from cjg48647@pegasus.cc.ucf.edu.

Hello,

my Atari-TT monitor PTC1426 is out of order. It is completely dark although the
green LED is on and from behind I can see the tube glooming. I brought the
monitor to a computer shop and they told me they will repair it. But after a
while the just said they can't do it because they need some special part (which
one they didn't tell me) and this very piece is not available anymore. So I
took the monitor back and had a look into it myself. I found a red cable coming
out of the "screen-transformator" (I don't know the exact term in English :-( )
hanging around. Where should I fix the other end of this cable? On the little
card just fixed at the tube there is no cable connected to "G2" that leads to
pin 7 of the tube. What should I fix there? On the main card in the lower right
corner there is "G2" twice. One cable leads to the card on the tube but the

second one is hanging around. Again, where should it be fixed?

If you have such a monitor I would appreciate it if you could have a look
into it.

Regards,
   Christoph Gartmann

These public domain games are due to be released by the end of
January. If you have any comments from the first two versions please
e-mail me (sinbad@globalnet.co.uk) and let me know what I can do to
improve them.

The new versions have actually been rewritten and features a brand new
main screen and of course images to find. The scoring is a bit more
down to earth now (thanks reviewers!).

Martin

Hello,

a friend of mine got 2 hard diks from PC. These disks are SCSI disk, Prodrive
LPS 120 and 340 from Quantum.He's working with Hushi scsi tool and can read
sectors, verifie these but can't partitionnig nor installing a bootsector. It
seems that these disks are low-level formatted, and that he can't do nothing.

Does anybody know a solution for this problem?

Regards.

Did they work when they were last used on the PC - and if so - what O/S were they used under?

I'v had no problem moving drives from PCs onto Ataris and back again. Whichever the drive is connected to - I can happily format and partition it.

This is using ICD Pro Utilities on a TT. Its a couple of years old now - but has useful features like being able to change the interleave. I had a drive on my PC with an interleave of 7 - and couldn't find anyway of changing it (actually only when I connected it to the TT did I find out that it was the interleave which was making it so slow). Anyway I had no problems formating and paritioning it using the ICD Pro Utilities - and after a DOS FDISK - the drive is now happily back up and running on the PC.

:-)

Roland.

Some drives need arbitration, meaning the computer has to identify itself with
its own SCSI-Id when requesting data. Since the TT is the only Atari-computer
with a proper SCSI-interface, this problem should only occur on ST-computers (I
don't know about falcon) when using disks via ACSI-port, because ACSI works
without arbtitration. But it seems strange to me that you can read sectors. On
which Computer does your friend run his drives ?

Eddi

From: sobek@irit.fr (Dr. Ralph P. Sobek)
Subject: Dump to Streamer/Sauvegarde sur Streamer
Date: 1996/05/13
Message-ID: <SOBEK.96May13154901@dusty.irit.fr>#1/1
X-Deja-AN: 154576565
organization: IRIT, Toulouse, France
newsgroups: fr.comp.sys.atari,comp.sys.atari.tech,comp.sys.atari

Is it possible to dump a hard disk to either an Exabyte drive on the
local SCSI bus, or (now that Atari's can communicate via IP) possible
to use a remote dump utility on a Sun? Has dump/rdump been ported to
the Atari ST? Can GEMAR be used in one of these configurations? How?

Est-ce possible de dumper un disque dur sur un streamer Exabyte soit
localement sur le bus SCSI ou (maintenant que les Atari peuvent
communiquer par IP) d'utiliser le dump/rdump sur une Station Sun?
Est-ce que dump/rdump ont ete porte sur Atari? Est-ce GEMAR peut etre
utilise? Comment?

Thanks in advance! Merci d'avance,

From: btomlin@crl.com (Bruce Tomlin)
Subject: Looking for Atari 7800 digital signature algorithm
Date: 1996/06/14
Message-ID: <4pt5jl$ojv@crl14.crl.com>#1/1
X-Deja-AN: 160266857
organization: San Antonio, TX
reply-to: btomlin@aol.com
newsgroups: comp.sys.atari,comp.sys.atari.8-bit,comp.sys.atari.st

I'm looking for the digital signature algorithm needed to make usable
Atari 7800 cartridges. I've heard a version of it ran on the Atari ST.

I have reverse-engineered the digital signature verification inside the
Atari 7800 itself, and it looks like one of those wonderful "product of
two primes" algorithms... with a 960-bit key!

If anyone knows anything, I would be very interested in either the prime
factors or a uuencoded copy of the program itself from which I can
extract them, so that I can make a program to generate the signature for

any given cartridge image.

I already have the 7800 side of the algorithm implemented in Turbo Pascal
(check out rec.games.video.classic if you want to see it), and it would be
easy to add the signature generator... IF I had the prime factors.

Guy, I am including the balance of the comp.sys.atari.* groups in this
discussion along with alt.config; it may be appropriate at this time to
include news.groups as well, but I will wait for comments before doing
so.

Guy Harrison wrote:
>
(I include here quotes from a couple of previous posters in the same
thread - to save time, I'll reply directly to these as well.)
> >> Since the comp.* group died for lack of use, I expect the alt.*

> >> this group are primarily interested in a place to illegally
> >> repost copyrighted software.

This comment (whose poster may remane nameless unless he wishes to step forward at this time) is frankly slanderous. As the proposer of the new groups, /and/ an established software author, I take personal umbrage at the expressed implication that I am a pirate. I suggest you ask the former BBS sysop and the author of RatSoft BBS how I feel about pirates - of course, he may not be aware of just who blew the whistle on his pirate activities.

> >> Annius V. Groenink <avg@cwi.nl> posted messages to the group asking
> >> whether anyone still found it useful and the vast majority agreed
> >> that the sensible thing was to remove the group. At the request of
> >> the moderator and the readership, it is now removed.

This is patently untrue. Annius posted one or two messages in comp.sys.atari.st remarking that he was planning to have the group rmgrouped, but the "vast majority" most of the readers most certainly did NOT agree to remove the group. I think most of us simply found it impossible to get anything past the moderator. Personally, I voted to retain the group.

An now, back to Guy's remarks:

> I attempted to post to this group on more than one occasion - at
> no time did I see any information on how to do so, and received no
> replies from attempting to do so requesting suitable help. It is no
> wonder the group was unused therefore.

It certainly appeared to me that the rmgroup was "railroaded" though. No voting results were cross-posted to the comp.sys.atari.* groups. By that time, however, the rmgroup was a /fait accompli/, as they say, so there was little anyone could do about it.

I can handle moderation - either manually or automatically. That's the
easy part. Getting the RFD accepted and passing the CFV is tough.

I just finished updating my Atari bookmarks page at
http://www.3rdplanet.com/~starship/atari.htm - the changes are mostly to make it
easier to get around on the pages, with some cosmetic mods and a bunch of new
links (including a new section, "References," for helping you find out how to do
STuff).

There are sections for both 8-bit and TOS-based systems. Pop in and take a
look sometime!

You're obviously unaware that "freenet" doens't mean cost-free access. It
means that the users pay the costs of operations, and not a large profit to
the system operators.

>>With the Internet voice phone and live video for the PC's, I think the

See above.

I'd also point out that, in spite of your obvious concerns that Atari binaries will somehow generate undue bandwidth problems, nothing could be farther from the truth. The largest Atari binary file I have ever seen was under 1 meg in size, and it is a complete Internet access package with SLIP stack and dialer, browser, telnet, ftp, email, and some odds and ends. Compare that to the average /game/ package for an IBM clone, running 3 megabytes and up, or Netscape, which at last count was something over 4 megs without a stack and dialer.

>>> The huge number of IBM users makes distribution via Usenet a lot more
>>> defensible. It might even save bandwidth if a large enough number of
>>> people want the files. That'll never be the case for Atari users.
>>Heck, they can go into a store and buy all the software they want! 8^) We
>>are rather limited in that respect!
>
>The technical point is that, for IBM software, distribution via Usenet
>uses less resources than distribution via ftp. For Atari software,
>it's the other way around.

I disagree. To oppose a binary newsgroup for Atari files while supporting the huge bandwidth required for PC files is a position revealing either ignorance or hypocrisy. I choose to ascribe it to ignorance; but opposing the newsgroup is a form of discrimination in either case, and does not speak well of one's attitdue towards the democratic process. You do have the right to express your opposition; I would like to enlighten you as to the facts of the situation, however, in hopes that you may change your mind.

The fact is that Atari binaries are miniscule in comparison to equivalent packages for Microsoft-OS platforms (and even compared to Mac platforms); there are few well-maintained ftp sites for Atari files nowadays, even though Internet access for Atari users is on the rise (in a rather steep curve, in fact) rather than on the decline; and those that remain do not all have email access to files.

The bandwidth requirements for an Atari-specific binaries group can be reasonably expeccted to be below that of a single IBM-clone binary file; certainly far below (perhaps several orders of magnitude lower) than any of the alt.sex.binaries groups.

The lifetime of a binary posted in newsgroups is far shorter than that of one archived in an ftp site, but becasue of the volatile nature of software development, this is in fact an advantage; one is far less likely to inadvertantly spend hours downloading a file that has been superseded by a later release; in the case of the soon-to-be-formally-proposed Atari

newsgroup, the odds approach zero, due to the nature of moderation and the proposed charter (which is now in something like its fourth incarnation).

The storage space for an archive of the newsgroup will be likewise small; a single 1 gigabyte drive will probably be far more than adequate for the next decade.

Did I fail to address any of your concerns? I'll be most pleased to follow up if I did.

Primary Atari newsgroups restored to the distribution line; this discussion concerns all Atari users.

Hello,
I'm trying to sync Cubase to a 25 fps SMPTE striped multitrack tape. I then will have to use the Human Sync feature since there's already some live music on the tape.

Could anyone post the procedure (settings I should use in the SYNC window ..) ?
I'm using the Midiman Syncman Plus.

Any advice would be greatly appreciated, I haven't been able to get Cubase to recognize or maybe even get the incoming SMPTE.

Have you ever tried "lynx ftp://ftp.somehost.domain"? Lynx speaks ftp
(at least, the version here does; I just tried it).

If that doesn't make it a lot cheaper than commercial ISPs, then why

do people use a crippled system?

That's irrelevant; posting a 1-K message instead of emailing it to the
only person who's interested uses a trivial amount of bandwidth,
almost all of which is wasted. The key issue is how many people at a
typical site want the group. The larger the number, the more likely
Usenet is the correct distribution mechanism. The smaller that
number, the less likely.

Subject: I need a Minix aware version of 'find' for MiNT
Date: 1996/10/14
Message-ID: <gigxr01-141096143045000l@47.85.0.99>#1/1
X-Deja-AN: 189320323
organization: Northern Telecom (Ireland) Ltd
newsgroups: comp.sys.atari.programmer,comp.sys.atari,st

Can anybody reccommend a version of 'find' which works with Minix partitions?

I am using the version from Knarf's German MiNT Distribution, GNU Find version 4.1 (I think). When I use 'find' on a TOS partition, it works as expected.

When I use 'find' on a Minix partition (30 character file names), it quits immediately with an error' memory exhausted'.

Also, can anybody tell me the correct way to pass arguments to find's '-exec' option. On another version of find, I had success with the following:-

find . -name *.ZIP -exec "ZIP -xrg {}".

When I try this with GNU find, it complains about no parameters for -exec.

I have read the 'find' MAN file, but can't make sense if it.

The arguments don't usually have to be quoted, but there should be a
quoted or escaped semicolon (\;) to end the -exec arguments.

Hi,

I'm asking a question for a friend who has an Atari 800XL and Atari
1040ST.
He also has a 486DX33 and wants to know if there is any software that
will allow him to READ and WRITE to the Atari formatted disk with the
IBM. I've heard of a program (some years ago) that is supposed to be
able to allow this process between formats but have never seen it...
so don't know how true this is either.

I've managed to help him a little by explaining how to change the
first 3 bytes of the Atari ST formatted disks (make them EB 34 90).
However, if there is anything quicker, we'd appreciate knowing.

ALSO... we'd like to know if there's something which will read the old
Atari 800XL disks (5.25").

Any and all comments, replies, etc will be appreciated.

Thank you.
Caine
